Introduction

The 2022-23 DairyNZ Economic Survey is the eighteenth annual survey of New Zealand dairy farmers using dairy farm business data from DairyBase®.

The Economic Survey of Factory Supply Dairy Farmers was first published in 1963-64 by the New Zealand Dairy Board. In 1988-89 the survey was undertaken by Livestock Improvement Corporation (LIC) and then Dexcel in 1999-2000, when the name was changed to Economic Survey of New Zealand Dairy Farmers. From 2005-06 DairyNZ published the survey under the new title DairyNZ Economic Survey.

DairyNZ is an industry good organisation, representing New Zealand's dairy farmers. Funded by a levy on milksolids and together with government investment, our purpose is to progress a positive future for New Zealand dairy farming and help dairy farmers successfully navigate through change. We aim to do this by leading innovation in world-class dairy farming and by working always in the best interests of New Zealand's dairy farmers. DairyBase® is owned and managed by DairyNZ on behalf of the dairy farmers of New Zealand.

Executive Summary

Compared to the previous season (2021-22), milksolids payout received by owner-operator farmers in the DairyNZ Economic Survey sample in 2022-23 decreased by \$0.51 to \$8.68 per kilogram of milksolids (kg MS), milksolids sold per cow increased by 5 kg MS to 418 kg MS, and stocking rate decreased by 0.1 cows to 2.8 cows/ha. As a result, milksolids sold per hectare decreased slightly in the 2022-23 season, from 1,199 kg MS/ha in 2020-21 to 1,174 kg MS/ha. Operating expenses per kilogram of milksolids increased by \$0.32 to \$6.67. The combination of a lower milksolids payout and higher operating expenses in 2022-23 resulted in an Operating profit per hectare of \$3,017, \$1,133 lower than the previous season. Operating return on dairy assets decreased from 7.6 percent (2021-22) to 5.4 percent (2022-23), and total return on assets decreased by 3.6 percentage points to 3.9 percent. The mix of lower returns from dairy operations and higher interest costs resulted in a lower Total return on equity in 2022-23 (3.5 percent) compared to the previous season (11.5 percent).

Owner-operator Summary

In the 2022-23 season owner-operators faced a decrease in milksolids payout, which together with a reduction in stocking rate and an increase in farm expenses led to a notable decline in operating profit compared to the previous season.

The milksolids payout received by owner-operators in 2022-23 was \$0.51 (6%) lower than the price received in 2021-22. Although milksolids sold per cow increased by 1 percent, milksolids sold per hectare decreased by 2 percent in the 2022-23 season due to a 3.4 percent reduction in stocking rate. The reduction in stocking rate in 2022-23 was in part associated with a reduction in the average herd size, from 419 to 407 cows. The reduction in herd size also contributed to the reduction in livestock income per kilogram of milksolids in 2022-23, from \$0.55 (2021-22) to \$0.51. Gross farm revenue per kilogram of milksolids in 2022-23 (\$9.24/kg MS) was \$0.57 lower than in the previous season, a consequence of lower income from the sale of milksolids and livestock. Farm working expenses and Operating expenses in 2022-23 (\$5.75/kg MS and \$6.67/kg MS, respectively) were the highest of the last 10 seasons, driven mainly by increases in feed, grazing off, labour and fertilisers expenses (Table 12.4). The Operating profit of \$3,017 per hectare in 2022-23 was down 27 percent on the previous season, a consequence of lower Gross farm revenue (-8 percent) and higher Operating expenses (+3 percent).

The cash surplus in 2022-23 (\$44,541) was above the 10-year average of (\$10,654). Cash surplus is the cash remaining from the farming operation during the year after rent, interest, tax, capital transactions, debt repayments, drawings, and discretionary expenses have been deducted. Factors that contributed to the high Cash surplus in 2022-23 were the increases in net off-farm income (\$36,366) and the significant reductions in net capital transactions (\$137,369) and net debt (\$38,791), compared to the previous year (Table 12.5).

In 2022-23, the total return on assets (3.9 percent) and the total return on equity (3.5 percent) were significantly lower than in the previous year but higher than their corresponding 10-year average (3.3 and 2.5 percent, respectively). In 2022-23, total liabilities decreased by \$46,773 to \$4,027,540. Closing term liabilities were \$22.22 per kilogram of milksolids, significantly lower than the peak of \$25.31 per kilogram of milksolids in 2017-18. On average, total equity growth was \$95,121, \$34,231 lower than the growth in equity from profit (\$129,388) due to negative growth in equity from capital (revaluation of assets).

50:50 Sharemilkers Summary

In this iteration of the DairyNZ Economic Survey, the physical characteristics of 50:50 Sharemilker (herd-owning sharemilkers) farms all increased, in terms of hectares, peak cows milked and milksolids production.

The combination of a lower gross farm revenue and higher farm working expenses contributed to tightened economic performance of 50:50 sharemilker farms relative to the previous season. However, despite the deteriorated performance, on average, 50:50 sharemilkers maintained positive profitability and returns. Additionally, the proportion of 50:50 sharemilkers experiencing extreme indebtedness (>70% debt to assets ratio) in 2022-23 (1.8 percent) decreased significantly relative to 2021-22 (4.6 percent).

Dairy operating profit per hectare for 50:50 sharemilkers decreased by 37 percent to \$1,104 per hectare in 2022-23. Lower milk payouts received (-\$0.40 per kilogram of milksolids) were partially offset by an increase in milksolids per cow (+10 kg MS) and a slight increase in herd size (+15 cows). Gross farm revenue of \$4.65 per kilogram of milksolids was down \$0.40 in 2022-23. Farm working expenses of \$3.05 per kilogram of milksolids were \$0.20 higher than last season. Operating expenses per kilogram of milksolids increased by \$0.15 in 2022-23 to \$3.76.

Cash surplus in 2022-23 (\$5,853) was significantly lower than in 2020-21 and 2021-22 (\$51,154 and \$38,556, respectively). However, the cash surplus in 2022-23 was still higher than the 10-year average of \$2,625. Factors that contributed to a lower cash surplus in 2022-23 were the reduction in cash operating surplus, from \$344,252 (2021-22) to \$250,934, and the higher-than-average interest expenses (\$29,384) and drawings (\$90,535). Tax expenses in 2022-23 (\$66,548) were 81 percent above the 10-year average (\$36,578), net debt (\$48,487) was 280 percent above the 10-year average (\$12,682) and drawings were 25 percent above the 10-year average of \$72,400.

50:50 Sharemilkers Summary Table

| Variable | 2021-22 | 2022-23 |
|---|---------|---------|
| PHYSICAL CHARACTERISTICS | | |
| Effective hectares | 140 | 147 |
| Peak cows milked | 422 | 437 |

1. Background

The 2022-23 DairyNZ Economic Survey summarises a sample of dairy farm data from the DairyBase® database. DairyBase® is available to all levy paying New Zealand dairy farmers. Annual surveys before 2005-06 were conducted by the Livestock Improvement Corporation (LIC) and Dexcel using a random sampling procedure stratified by region and herd size. In contrast, participation in DairyBase® is voluntary, and on average, it includes farms that have higher-than-average milk production levels. For this publication, groups of farms were selected to match the average regional herd size, hectares and milksolids production as published in the New Zealand Dairy Statistics 2022-23 as close as possible while maintaining a large sample size.

The purpose of DairyBase® is to improve the financial understanding and performance of dairy farmers using a benchmarking approach and is designed to link the physical and financial performance of farms. DairyBase® contains financial data from annual farm accounts, physical data supplied by the farmer, and estimated current market values of fixed assets. The DairyBase® support centre, accredited accountants and other rural professionals enter the data on behalf of their clients, and it is validated within DairyBase®. Farmers wishing to benchmark their farm performance have access to a wide range of statistics in DairyBase®, including (where numbers permit) regional, district and production system data.

2. Survey Description

2.1. Survey Methodology

Groups of farms were selected to match the average regional herd size, hectares and milksolids production as published in the New Zealand Dairy Statistics 2022-23 as close as possible while maintaining a large sample size. The initial pool of farms included 811 owner-operators and 238 50:50 sharemilkers (herd-owning sharemilkers) with data validated and committed to the DairyBase® database for the 2022-23 financial year. Businesses were then excluded for the following reasons:

- multiple herds operating under one business identity.
- herds with fewer than 50 cows.
- businesses with a significant change in the land area during the year (>10%).
- extreme outlier data.
- incomplete financial data.

The sample selection process aimed to align the regional and national average herd sizes, hectares and milksolids production for each of these two ownership structures while retaining a reasonable number of farm businesses. These regional and national averages are available in the 2022-23 New Zealand Dairy Statistics publication.

The final number of herds included in this survey comprised 266 owner-operators and 109 50:50 sharemilker herds. Of the owner-operator herds, 200 (75%) were North Island herds, and 66 (25%) were from the South Island. Of the sharemilker herds, 77 (71%) were from the North Island, and 32 (29%) were South Island herds.

2.2. Ownership Structure Definitions

An owner-operator receives 100 percent of the milk revenue and either owns, or leases, both the herd and the land. In contrast, a 50:50 sharemilker owns the herd but not the milking land and receives 50 percent of the milk revenue. Although the definition of sharemilkers used in this survey is 50:50, in practice, they may receive between 40 percent and 60 percent of the milk revenue. Herds with variable order sharemilkers, and farm owners with sharemilking arrangements, were not included in this survey.

2.3. Sample Unit

The data used in this survey reflects the total dairying enterprise of each business. Where businesses have multiple ownership types, such as partnerships and trusts, the accounts of all entities are consolidated and entered as one.

2.4. Survey Weights

All national averages in this report have been weighted by the regional proportion of herds reported in the 2022-23 New Zealand Dairy Statistics (Table 2.1). Simply averaging the regional data shown in this document does not produce the same national average. Weighting the data ensures that each region contributes a representative

proportion to the national averages. The national averages for 50:50 sharemilkers are weighted by the regional proportion of sharemilkers.

Table 2.1: Dairy Statistics 2022/23

| Region | Owner-operator herds | % of Owner-operator herds | 50:50 Sharemilker herds | % of 50:50 Sharemilker herds |
|-------------------------------|-------------------------|------------------------------|----------------------------|---------------------------------|
| Northland | 442 | 7.9 | 171 | 5.7 |
| Waikato | 1,760 | 31.3 | 1,126 | 37.8 |
| Bay of Plenty | 287 | 5.1 | 150 | 5.0 |
| Taranaki | 820 | 14.6 | 453 | 15.2 |
| Lower North Island | 583 | 10.4 | 197 | 6.6 |
| West Coast - Top of the South | 305 | 5.4 | 89 | 3.0 |
| Canterbury | 701 | 12.5 | 361 | 12.1 |
| Otago - Southland | 729 | 13.0 | 431 | 14.5 |
| Total New Zealand | 5,627 | 100 | 2,978 | 100 |

2.5. Herd Size Distributions

The average owner-operator herd in the DairyNZ Economic Survey had 407 cows, 12 cows lower than in the 2021-22 season. In comparison to the 2022-23 New Zealand Dairy Statistics national average herd size of 435, the average DairyNZ Economic Survey farm had 28 fewer cows.

Graph 2.1 shows a comparison of the owner-operator herd distribution between the 2022-23 DairyNZ Economic Survey and the 2022-23 New Zealand Dairy Statistics. In general, the DairyNZ Economic Survey:

- is over-represented by herds between 200 and 500 cows.
- is under-represented by herds with less than 200 cows, and by herds with 700 cows or more.

Graph 2.1: New Zealand Owner-operator Herd Size Distributions 30 = Percentage of Owner-operators (%) 10 0 300 - 399 499 299 669 799 800 - 899 666 - 006 961 - 001 400 -- 009 - 009 7007 Herd size (cows) Dairy Base Dairy Statistics

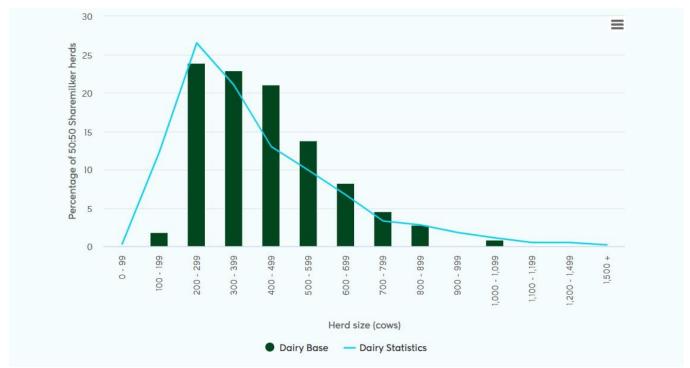

Page 8

The DairyNZ Economic Survey national average herd size for 50:50 sharemilkers of 437 cows is larger than the 402 cows recorded in the 2022-23 New Zealand Dairy Statistics.

As compared with the 2022-23 New Zealand Dairy Statistics (Graph 2.2), for 50:50 sharemilkers, the DairyNZ Economic Survey:

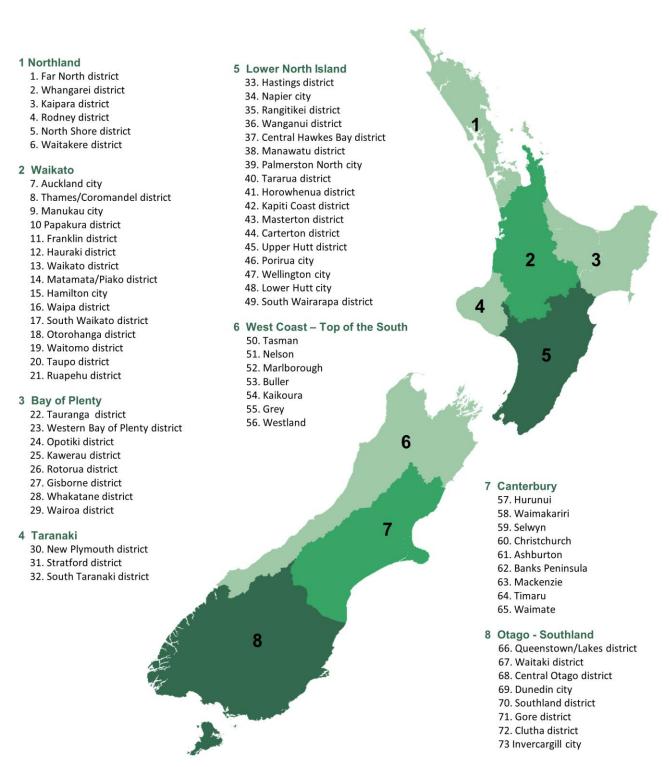

- has no herds under 100 cows, herds between 900 and 1000 cows, and herds with more than 1,100 cows.
- is over-represented by herds between 400 and 600 cows.
- is under-represented by herds between 100 and 300 cows.

Graph 2.2: New Zealand 50:50 Sharemilker Herd Size Distributions

2.6. Survey Regions

This survey uses geographic districts as defined by the 73 Territorial Local Authorities (TLAs). These districts are amalgamated into eight regions, five in the North Island and three in the South Island. Regions 6 and 7, and the TLAs included in them were updated in the 2021-22 Dairy Economic Survey, to reflect similar changes in DairyBase®. Since 2021-22, the Marlborough and Kaikoura districts were moved from the Marlborough - Canterbury region to the West Coast - Top of the South region. For regions 6 and 7, part of the differences between values before and after the 2021-22 season (sections 7.1 and 10.1) is due to the rearrangement of the TLAs that were part of them.

2.7. Production Systems

Farms are categorised into one of five production systems based on the timing, purpose and amount of imported feed used, both purchased as supplements and grazing off for dry cows. Young stock grazing policies are excluded when categorising herds into the five production systems described below.

System 1: All grass, self-contained, all adult stock on the dairy platform.

• No feed is imported. No supplement is fed unless harvested off the effective milking area, and dry cows are not grazed off the effective milking area.

System 2: Feed imported fed to dry cows (either supplement or grazing off).

• 90-99 percent of total feed is home grown feed. Variation in percentage as most cows are wintered off in high rainfall areas or cold climates.

System 3: Feed imported to extend lactation and for dry cows.

• 80-89 percent of total feed is home grown feed.

System 4: Feed imported and used at both ends of lactation and for dry cows.

• 70-79 percent of total feed is home grown feed.

System 5: Imported feed used all year.

50-69 percent of total feed is home grown feed, though it could be less than 50 percent in some cases.

This publication refers to low, medium and high input systems. These are defined as:

- Low: system 1 and system 2.
- Medium: system 3.
- High: system 4 and system 5.

2.8. Operating Profit Adjustments

Non-cash adjustments for resources used but not accounted for by cash income or expenditure are made when calculating the operating profit. A summary of these adjustments is shown below. For more detail, refer to the DairyBase® Operating Profit Adjustments and DairyBase® Livestock Values documents. An example of non-cash adjustments is the value of change in dairy livestock. This is the value due to a change in livestock numbers which is added or subtracted (if negative) to net dairy cash income to form gross farm revenue. This adjustment is made because the revenue from net dairy cash income can be affected by changes in herd size. For example, in drought years, more stock is sold and therefore, revenue through net livestock sales will be considerably higher. Similarly, livestock will be purchased in the years following a drought to increase numbers to a more normal level. The adjustment offsets these changes with a value for change in livestock on hand.

The operating profit adjustments include:

- The value of change in dairy livestock. This is calculated as follows: closing livestock numbers less opening livestock numbers, valued at closing herd scheme values (Inland Revenue).
- Labour adjustment. This has two components: unpaid management based on the size of the herd and time worked, and unpaid labour valued at an hourly market rate.
- Feed inventory adjustment. This is estimated as closing supplementary feed on hand less opening supplementary feed on hand, valued at a standard 42 cents per kilogram of dry matter in 2022-23.
- Owned support block adjustment. This value is based on the regional market lease rate per hectare.
- Depreciation. This is the depreciation recorded in the annual financial statements of the farm.

2.9. Asset Values

DairyBase® calculates market values for land and buildings by using the most recent rateable valuations for each farm and adjusting these to 1 June 2022 and 1 June 2023 market values using sales data supplied by Quotable Value and REINZ, plus discussions with regional real estate agents and valuers. Opening and closing livestock values for each year are calculated using the Inland Revenue herd value scheme NAMV (National Average Market Values) for the appropriate age group of animals. Plant, machinery and vehicle values are recorded at book value. Off-farm assets and investments are shown as market values.

2.10. GST

The financial data is GST exclusive as these transactions are neutral to the farm operation.

2.11. Statistical Methodology

Multiple methodologies are used in the DairyNZ Economic Survey to generate statistics.

Tables and graphs that use time series data are generated using an average of sums methodology. The average of sums involves summing all values together. While per farm values will be equivalent to the arithmetic mean, values that are divided by the number of cows, hectares, and milksolids will report the average value divided by the average denominator.

The average of sums approach ensures that table entries add up to totals and sub-totals. However, a consequence of this methodology is that the averages reported are not equivalent to the arithmetic mean and can be biased depending on the data distribution. This bias can be severe in small samples, such as those used to produce the regional and production system tables. To circumvent issues of this kind, we now report the median of the data in the tables and graphs that are most at risk of showing such bias i.e. regional data. The median is the number that divides the data into two halves, such that half of the data is below, and half the data is above this value. It is a robust and unbiased representation of the centre of the data. In the affected tables, entries will no longer add up to totals and sub-totals but provide a more accurate and representative value for the data. For example, in Table 7.1, we can see that by adding milk sales (net of dairy levy), net livestock sales (sales - purchases) and other dairy cash income, they do not add up to net dairy cash income, in contrast to the equivalent table presented in the 2018-19 version of the DairyNZ Economic Survey.

The median is used in several different figures and tables:

- In Figure 3.1, we use the median deviation from the 30-year median rainfall. We do this because the arithmetic average is not robust to severe weather events that may misrepresent the true average rainfall a region receives in a season.
- In Tables 7.1, 7.2, 10.1 and 10.2, we report the median values for the table entries. Issues applying the average of sums methodology on these tables were identified in 2020. It was decided that accurate representation of these values was more important than ensuring the values added up in the table.

3. Physical Analysis

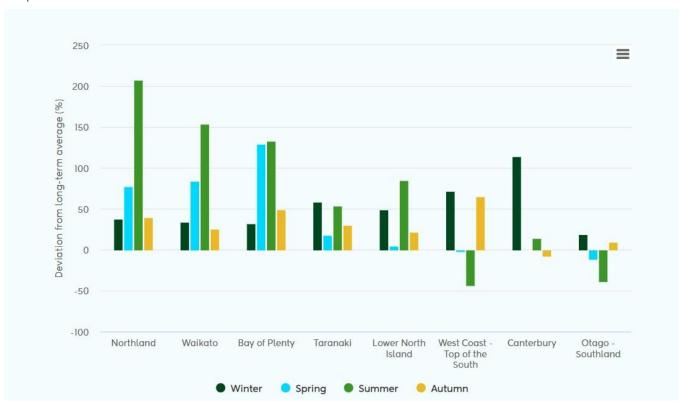

3.1. Introduction

The DairyNZ Economic Survey reports the trends in the financial performance of dairy farms but not all the trends in physical performance. While not presented, there are key physical indicators of milk production such as the days in milk, cow condition, reproductive performance, soil fertility, and fertiliser use data available in DairyBase®. It is the combination of the physical performance of the farm reflected through milksolids production, the cost of production and milk prices that drives the financial results. To find out more about the physical performance of dairy farms refer to New Zealand Dairy Statistics, available on the DairyNZ or LIC websites.

3.2. Rainfall Summary

NIWA supplies daily climate data for various points across New Zealand with their Virtual Climate Station Network. These data are collated into district-level averages for each month, weighted for areas where more farms are located. Within each region, median rainfall for the October to December (spring), January to March (summer), April to June (autumn) and July to September (winter) periods was calculated. The variation in the median regional rainfall from the thirty-year-weighted median is shown in Figure 3.1. See section 2.11 for an explanation of the median methodology used here. Overall, most regions had significantly wetter summers than the thirty-year weighted median, with only the West Coast - Top of the South and Otago - Southland regions experiencing less rain in summer than the long-term average.

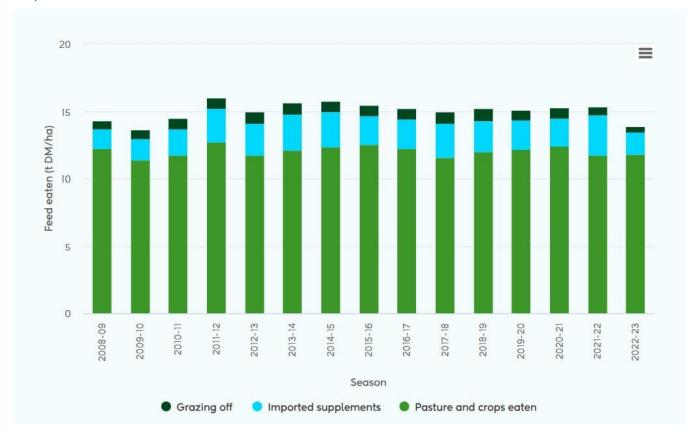

3.3. Feed Use

Pasture and crop eaten, grazing off farm, and imported feed were estimated from the subsample of farms in DairyBase® that completed a physical analysis. Pasture and crop eaten marginally increased from 11.73 tDM/ha in 2021-22 to 11.82 tDM/ha in 2022-23, while the use of imported supplements decreased from 2.97 tDM/ha to 1.62 tDM/ha (Figure 3.2).

In 2022-23, of the total feed eaten per hectare, approximately 85 percent corresponded to pasture and crops eaten, 12 percent to imported supplements and 3 percent to grazing off. On average total feed eaten per hectare decreased in 2022-23 relative to 2021-22 and the 10-year average (15.2 tDM/ha).

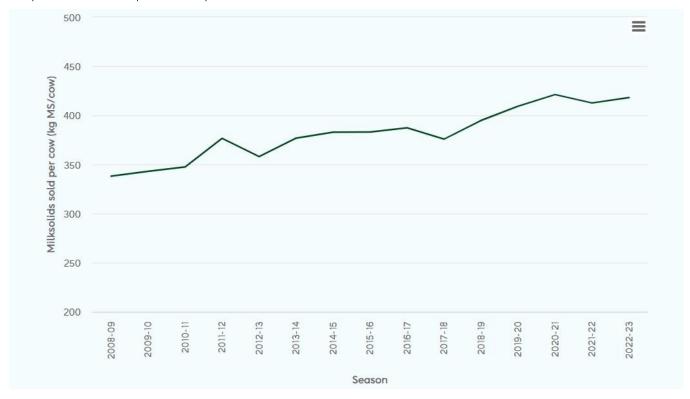

Graph 3.2: Trends in feed use

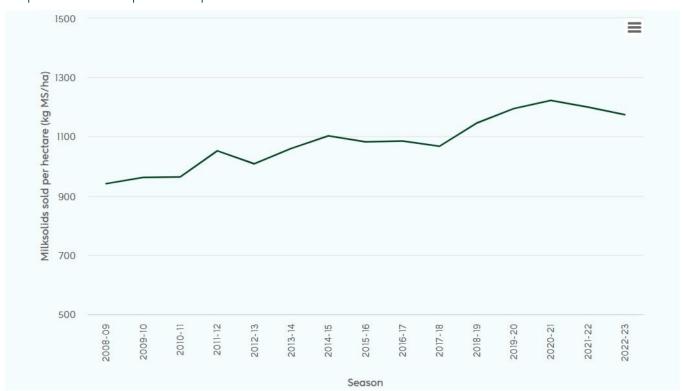

3.4. Partial Productivity

Milk production per cow increased from last season while milk production per hectare decreased from last season (Figure 3.3 and 3.4, respectively). On the average dairy farm in the DairyNZ Economic Survey, milksolids sold per cow increased from 413 kg in 2021-22 to 418 kg in 2022-23. Milksolids sold per hectare decreased from 1,199 kg in 2021-22 to 1,174 kg in 2022-23.

Graph 3.3: Milksolids production per cow

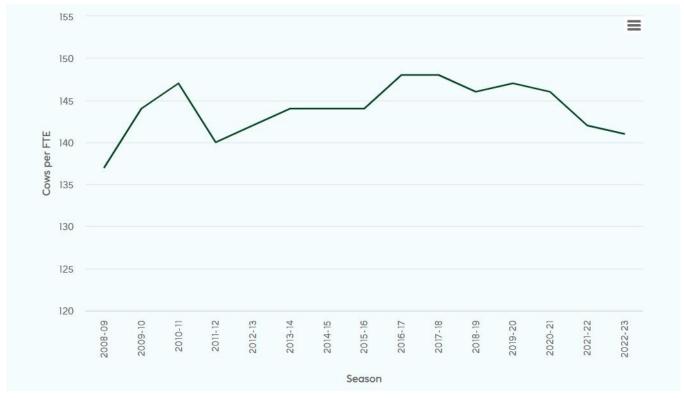

Graph 3.4: Milksolids production per hectare

The number of cows per FTE has decreased slightly in the last four seasons, from 147 cows per FTE in 2019-20 to 141 cows per FTE in 2022-23 (Figure 3.5).

Graph 3.5: Cows per FTE

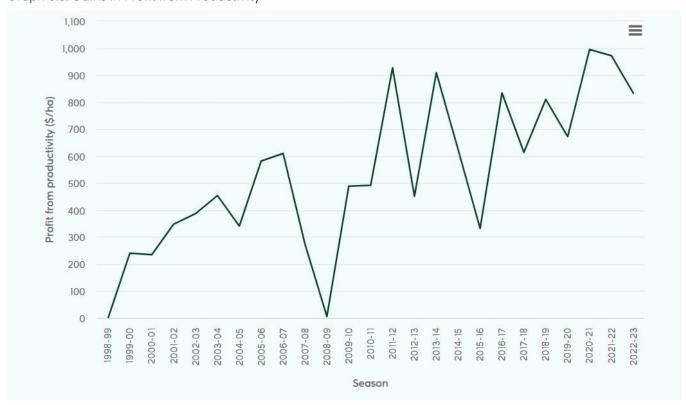

3.5. Profit from Productivity

Productivity improvements over time are essential to sustain or grow business profits and compete successfully with alternative uses for resources. DairyNZ has developed a measure for productivity based on operating profits. Operating profit from productivity (PFP) is defined as the difference between actual operating profit and the operating profit that would have occurred with no productivity changes since a base year (i.e. in the absence of milksolids production increases and with operating expenses per kilogram of milksolids increasing annually at the rate of dairy farm input price inflation), see Figure 3.6. PFP is a measure of cost-efficient milksolids production increases since the base year, valued at the end of the year operating profit margin per kilogram of milksolids. It excludes the cost of capital, although depreciation and changes in hectares are accounted for. The three main contributory components of PFP are milksolids production increases since the base year, operating expenses savings in inflation-adjusted terms since the base year, and end-year operating profit per kilogram of milksolids (influenced by milk prices). DairyNZ and dairy farmers are increasingly focused on achieving cost-efficient milksolids production, and PFP provides a means for monitoring the value of productivity gains over time.

PFP decreased from \$972 per hectare in 2021-22 to \$833 in 2022-23 (1998-99 base year PFP = \$0/ha). Figure 3.6 shows the gains made in PFP were relatively steady from 1990-91 to 2006-07. However, fluctuations in milk prices, seasonal rainfall and inflation have caused PFP to be more volatile since then.

Graph 3.6: Gains in Profit from Productivity

4. Prices Received and Paid

4.1. Milk Payment

In 2021-22, owner-operators in DairyBase® received an average cash payout of \$8.68/kg milksolids sold (net of the industry good levy but includes advance and final payments). This was \$0.51 less than the previous season. The 2022-23 New Zealand Dairy Statistics publication reported an average nominal payout (including dividend payments) of \$9.26/kg MS.

International dairy prices (Graph 4.1) decreased steadily during the 2022-23 season. Between May 2022 and May 2023, the price of whole milk powder, skim milk powder, cheese and butter decreased by 18 percent, 33 percent, 21 percent and 13 percent, respectively.

Graph 4.1: World Milk Commodity Prices (US \$/tonne)

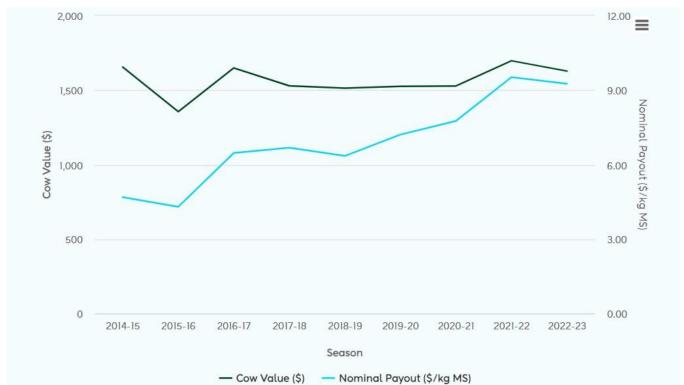

The 2022-23 average nominal milk payout reported by the New Zealand Dairy Statistics publication of \$9.26 per kilogram of milksolids was \$1.00 above the decade average in inflation-adjusted terms (\$8.23) (Graph 4.2). Although the milk payout per kilogram of milksolids decreased in 2022-23, it is still the second highest of the last 9 seasons.

12.00 \equiv 11.00 10.00 9.00 Mik payout (\$/kg MS) 8.00 7.00 6.00 5.00 4.00 3.00 2013-14 2014-15 2015-16 2016-17 2017-18 2018-19 2019-20 2020-21 2021-22 2022-23 Season — Inflation adjusted - Nominal

Graph 4.2: Trend in Milk Payout (Nominal and Real)

4.2. Livestock Prices

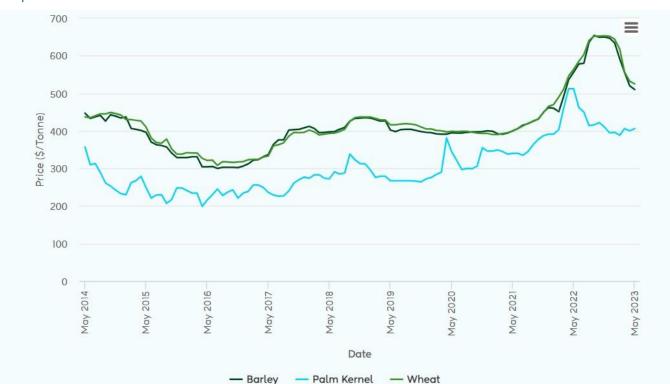

The value of mixed aged dairy cows decreased to \$1,628 in 2022-23 (from \$1,697 in the 2021-22 season). Dairy cow values, in nominal terms, were close to the decade average of \$1,574. Historically, dairy cow values have followed the trend in milk prices, often with a slight time lag (Graph 4.3).

Graph 4.3: Trend in Cow Values Relative to Milk Payout

4.3. Feed and Fertiliser Prices

The price for barley and wheat increased by about 13 percent and 12 percent respectively in the first half of the season and decreased in the second half of the season to values below those observed at the beginning of the season (Graph 4.4). During the 2022-23 season, the price per tonne of barley varied between \$578 (June 2022), \$654 (September) and \$510 (May 2023). The price per tonne of wheat varied between \$585 (June 2022), \$653 (September) and \$525 (May 2023). In contrast to the change in the price of barley and wheat, the price of PKE decreased in the first half of the season (from \$462/tonne in June to \$395/tonne in December) and remained relatively stable in the second half of the season.

Graph 4.4: Feed Prices

During the 2022-23 season the price of urea and Di-Ammonium Phosphate (DAP) fertilisers decreased steadily, especially in the second half of the season (Graph 4.5). The price per tonne of urea decreased from \$1,454 in June 2022 to \$1,330 in January 2023 and \$1,049 in May 2023, this represented a 28 percent decrease in price during the season. The price per tonne of DAP decreased by about 10 percent, from \$1,362 to \$1,229. The price per tonne of superphosphate remained relatively constant, and although it decreased during the middle of the year (from \$497 to \$442), it returned to its opening price by May 2023 (\$500).

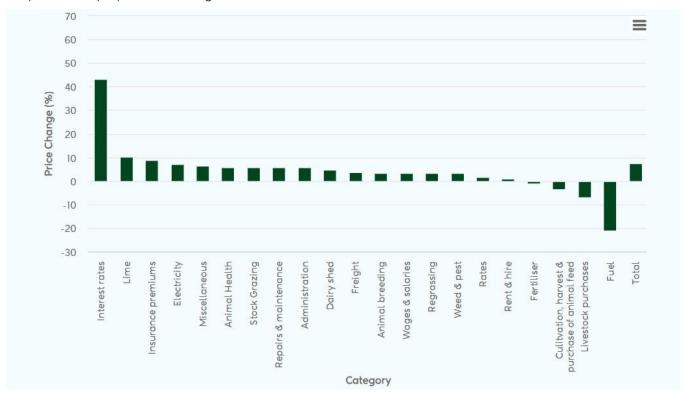

Graph 4.5: Fertiliser Prices

4.4. On-farm Inflation

Statistics New Zealand compiles the movement of on-farm input prices in the Farm Expenses Price Index for dairy farms. The percentage movement of each category is weighted by a three-year rolling average of the contribution of each category to total expenditure. In the year to June 2023, the overall change in expense price index was a 7.4 percent increase. The price movements of individual categories for the 2022-23 season are shown in Graph 4.6. The categories that experienced price reductions were fertiliser (-1%), cultivation, harvest & purchase of animal feed (-3%), livestock purchases (-7%) and fuel (-21%). The most notable increase was for interest rates (+43%).

Graph 4.6: Dairy Input Price Changes

The Producer Price Index (Stats NZ NZSIOC Level 3, June 2022 to June 2023) decreased to 1.1 percent, from 16.5 percent the previous year (Graph 4.7). General inflation, as measured by the Consumer Price Index (CPI), decreased from 7 percent to 6 percent in 2022-23, but it was still high compared to other earlier seasons.

Graph 4.7: Dairy Farm Producer Price Index and CPI Changes

5. Owner Operator: Operational Financial Analysis

5.1. Introduction

Dairy operating profit of \$3,017 per hectare in 2022-23 was down 27 percent on the previous season. The milk payout received of \$8.68 per kilogram of milksolids sold was down \$0.51 (about 6 percent) on the average price received in 2021-22. Milksolids sold per cow increased by 5 kg, but milksolids sold per hectare decreased by 25kg in 2022-23. Net livestock income (sales minus purchases) per kilogram of milksolids sold decreased slightly, from \$0.55 in 2021-22 to \$0.51 in 2022-23. Gross farm revenue was \$9.24 per kilogram of milksolids in 2022-23, \$0.57 lower than the previous season. Farm working expenses (FWE) of \$5.75 per kilogram of milksolids was significantly higher (+\$0.43) than the last season. Compared to the previous season, operating expenses increased by \$0.32 in 2022-23 to a record-high of \$6.67 per kilogram of milksolids (third consecutive record-high in a row). The cash available for living and growth in 2022-23 was \$301,982 per farm, 29% lower than the previous season.

5.2. Revenue

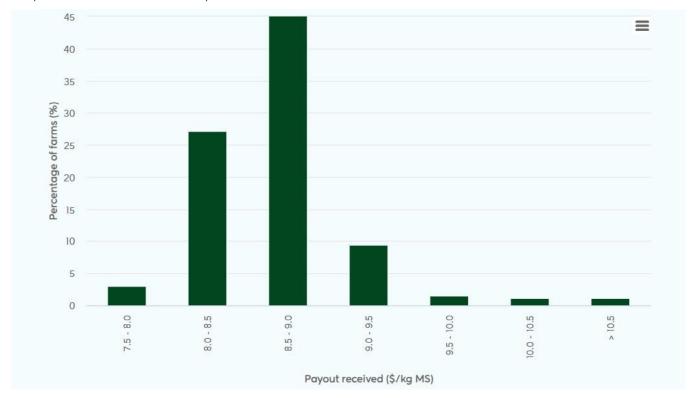

The milk payout received (including dividend payments) in 2022-23 decreased by \$0.51 (about 6 percent) from the previous season to \$8.68 per kilogram of milksolids sold. Milk sales per farm (net of dairy levies) decreased by \$113,169 (about 7 percent) from last season to \$1,570,293, the second highest of the last 10 seasons. Milk revenue in 2022-23 accounted for 94 percent of gross farm revenue. Net revenue from livestock sales decreased by \$8,974 to \$86,782 in 2022-23. Livestock revenue accounted for 5.5 percent of the total gross farm revenue per farm. Table 12.1 describes average revenue per farm, while revenue values normalised by cows and effective hectares can be found in tables 12.2 and 12.3 respectively.

During the 2022-23 season, the milksolids payout (\$/kg MS) received by farmers varied between 7.5 and 10.5 (Graph 5.1). These differences are driven by:

- Variations in the milk composition (fat, protein, lactose, minerals),
- Transport distances,
- Annual account balance dates,
- Milk company supplied,
- Different systems such as organics,
- Penalties incurred,
- Whether the farm operated in the previous season.

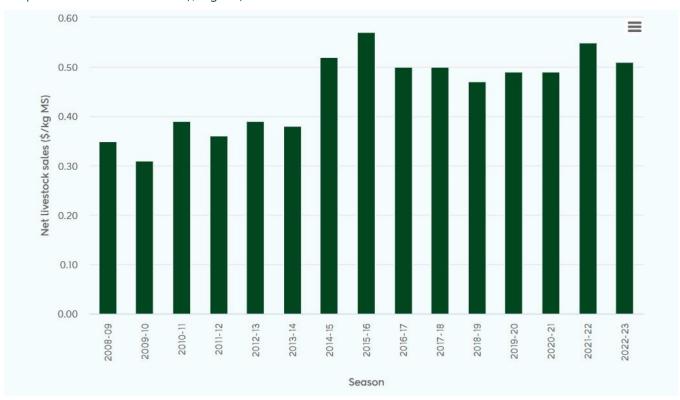

Ninety three percent of farms received a milksolids payout (milk price plus dividend) between \$8.0 and \$9.5 per kilogram of milksolids in 2022-23. The highest percentage was between \$8.50 and \$9.00, with 57 percent of farms receiving a milk payout in this range.

Graph 5.1: Distribution of Milk Payout Received

Cash income from net livestock sales (\$/kg MS) decreased from \$0.55 in 2021-22 to \$0.51 in 2022-23 (-7 percent).

Graph 5.2: Net Livestock Sales (\$/kg MS)

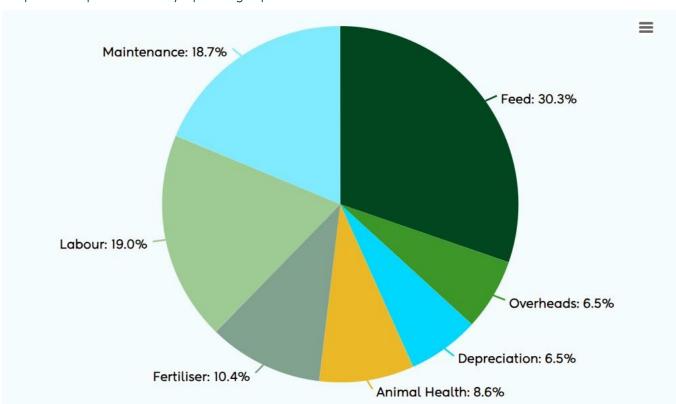

Dairy gross farm revenue on a typical New Zealand dairy farm was \$1,571,170, 7 percent lower than the previous season (\$1,694,953 in 2021-22). On a per hectare basis, gross farm revenue of \$10,851 was 8 percent lower than the per hectare gross farm revenue in 2021-22 (\$11,761). At \$8.68 per kilogram of milksolids, gross farm revenue in 2022-23 was \$0.57 (6%) below the previous season when measured on a per kilogram of milksolids sold basis.

Tables 12.1, 12.2, 12.3 and 12.4 in chapter 12 show net cash income, cash farm working expenses and the adjustments made to calculate operating profit for the average New Zealand owner-operator on a per farm, per cow, per hectare and per kilogram of milksolids sold basis, respectively.

5.3. Expenditure

Graph 5.3 shows the major 2022-23 expenditure categories. Feed continues to be the largest expenditure category at 30.3 percent in 2022-23 and has been the largest expense category since 2007-08. Labour was the second-highest operating expense for dairy farms at 19.0 percent of total operating expenditure. Maintenance and fertiliser contributed 18.7 and 10.4 percent, respectively.

Graph 5.3: Proportion of Dairy Operating Expenditure

Changes in the total farm expenditure are affected by the farm area, herd size and milksolids produced. Therefore, it is more appropriate to consider spending per cow, hectare, or kilogram of milksolids to measure the movement of expenses for individual items. Average farm working expenses (i.e. cash expenses) per kilogram of milksolids increased by \$0.43 (+8%) to \$5.75. This was the highest expenditure recorded in the last 10 seasons.

Dairy operating expenses per kilogram of milksolids were \$6.67, \$0.32 above the 2021-22 season. As with many of the trends over the season this was the highest level of operating expenses in the last decade with a larger change than typically observed. This was the second time that operating expenses per kilogram of milksolids exceeded \$6.

Table 5.1 shows the distribution (%) of dairy expenses in the last 10 seasons. The proportion (%) of feed expenditure in the 2022-23 season (30.3%) was the highest of the last 10 seasons and was associated to the high feed costs and inflation during that season. The proportion of fertiliser expenses in the 2022-23 season (10.4 percent) was also the highest of the last 10 seasons.

Table 5.1: Proportion (%) of Dairy Operating Expenditure in the last 10 years.

| Season | Animal health expenditure (%) | Depreciation expenditure (%) | Feed expenditure (%) | Fertiliser expenditure (%) | Labour expenditure (%) | Maintenance expenditure (%) | Overheads expenditure (%) |
|---------|-------------------------------------|------------------------------------|----------------------------|----------------------------------|------------------------------|-----------------------------------|---------------------------------|
| 2013-14 | 8.1 | 7.5 | 27.7 | 11.6 | 19.2 | 19.8 | 6.1 |
| 2014-15 | 8.6 | 8.5 | 27.2 | 10.1 | 20.8 | 18.3 | 6.5 |
| 2015-16 | 7.8 | 9.2 | 26.5 | 9.9 | 22.6 | 17 | 7 |
| 2016-17 | 8.6 | 9.2 | 24.6 | 10.2 | 21.4 | 19 | 7 |
| 2017-18 | 8.6 | 8.7 | 25.4 | 9.9 | 21.1 | 19.8 | 6.5 |
| 2018-19 | 8.6 | 8.2 | 27.9 | 9.1 | 20.5 | 18.8 | 6.9 |
| 2019-20 | 8.9 | 8.2 | 27.2 | 9.2 | 20.2 | 19.6 | 6.7 |
| 2020-21 | 8.8 | 7.9 | 27.9 | 8.8 | 20.3 | 19.5 | 6.8 |
| 2021-22 | 8.6 | 7.1 | 28.9 | 9.6 | 19.1 | 20.1 | 6.6 |
| 2022-23 | 8.6 | 6.5 | 30.3 | 10.4 | 19 | 18.7 | 6.5 |

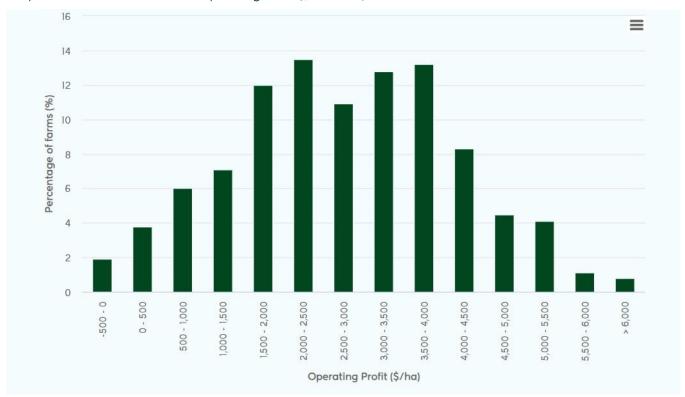

Table 12.4 shows the changes in the categories of operating expenses per kilogram of milksolids. Many of these expenses have followed close to their long-term trend. Feed and fertiliser saw increases greater than the preceding years, driving up dairy operating expenses and therefore there is a large variation in operating expenses from 2021-22 to 2022-23.

5.4. Profitability

Operating profit is a key indicator of dairy farm financial performance. This measure, expressed on a per hectare basis, is beneficial for comparing the profitability between farms. Operating profit incorporates adjustments to allow comparisons between farms, but does not include interest, tax, rent payments or capital expenditure. Table 12.3 shows the revenue and expenditure items included in operating profit on a per hectare basis.

Graph 5.4 shows the distribution of 2022-23 operating profit per hectare. Operating profit per hectare was distributed around the mean (\$3,017) per hectare, reflecting a wide range between farms. More than 87 percent of farmers had operating profits between \$0 and \$4,500 per hectare, while 10.5 percent of farmers had operating profits over \$4,500 per hectare. In contrast to the 2021-22 season where no farmers had a negative operating profit per hectare, 1.9 percent of farmers recorded a negative operating profit in 2022-23 (Graph 5.4).

Graph 5.4: Distribution of Owner-operating Profit (\$/hectare)

Graph 5.5 shows the distribution of operating profit (\$/ha) in the last ten seasons. The distribution of operating profit has noticeable shifts across seasons, and it is clearly influenced by the milksolids payout received (\$/kg milksolids sold), with a higher spread at high payouts and a narrower spread at lower payouts. In 2022-23, the range in operating profit (\$/ha) was smaller than in the previous season, with 50% of farms (between the 25th and 75th percentile) having an operating profit per hectare spanning \$1,919 (between \$1,793 and \$3,712), and 10% of farms having an operating profit per hectare below \$889.

Graph 5.5: Distribution of operating profit (\$/ha) in the last 10 seasons

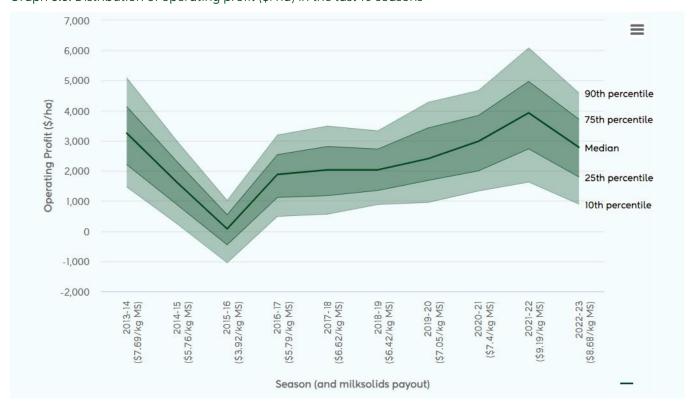

Table 5.2 and Table 5.3 show the average size and profitability of farms by quartile. Quartiles were constructed by ranking surveyed farms on operating profit per hectare across New Zealand. Top quartile farms average \$4,575 operating profit per hectare, compared with \$1,065 for the bottom quartile group. Each quartile group produced more milksolids per hectare compared with the quartile lower. Top quartile farmers produced approximately 45 percent more kilograms of milksolids per hectare than the bottom quartile farmers, with substantially lower farm working expenses per kilogram of milksolids (-25%).

There is minimal difference in gross farm revenue per kg MS across the quartiles. The differences in profit per kilogram of milksolids between the quartiles is mainly driven by significant differences in the groups operating expenses per kilogram of milksolids. Top farms are more efficient as demonstrated by their lower operating expenses per kilogram of milksolids. Operating expenses per kilogram of milksolids increased from the top quartile group to the bottom quartile group from \$5.80 to \$8.03, respectively.

Table 5.2: 2022/23 Owner-operator Quartile Profit (\$/kg MS)

| Variable | Bottom Quartile | Lower Middle Quartile | Upper Middle Quartile | Top Quartile |
|---|--------------------|--------------------------|--------------------------|-----------------|

| Operating profit margin (%) | 12.7 | 24.7 | 30.9 | 37.5 |
| | | | | |

In 2022-23, the operating return on dairy assets ranged from 2.5 percent in the bottom quartile to 7.8 percent in the top quartile, a range of 5.3 percentage points (Table 5.3). This range in operating return on dairy assets (difference between the top quartile and the bottom quartile) was slightly smaller than the one observed in 2021-22 (5.8 percent).

Table 5.3: 2022/23 Owner-operator Quartile Financial Position

| Variable | Bottom Quartile | Lower Middle Quartile | Upper Middle Quartile | Top Quartile |
|--|-----------------|-----------------------|-----------------------|--------------|
| RETURNS: | | | | |
| Operating return on dairy assets % | 2.5 | 5.0 | 6.0 | 7.8 |
| Total return on assets % | 3.8 | 5.6 | 4.7 | 5.7 |

| Growth in equity % | 5.6 | 7.0 | 2.1 | 2.9 |
| DEBT: | | | | |
| Closing term liabilities (\$/kg MS sold) | 22.25 | 20.79 | 22.78 | 23.83 |
| Closing debt to asset % | 41.2 | 39.4 | 41.2 | 47.8 |

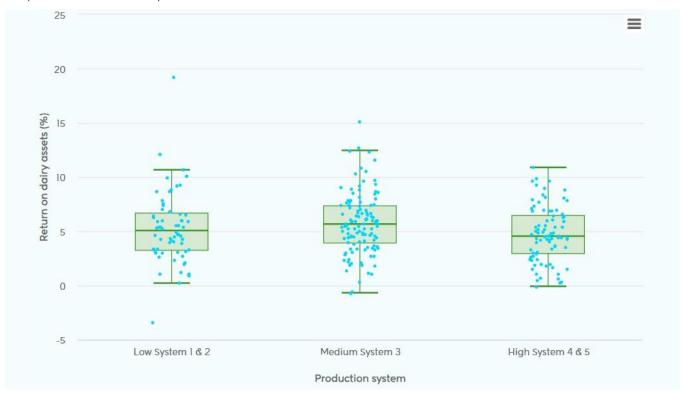

Measuring the cost efficiency of milksolids production (operating expenses/kg MS) relative to milksolids payout is more relevant than production or expenditure alone when focusing on how to achieve high profit margins. The last two rows in Table 5.4 denote the strength of the association between these variables. A value of 0 percent denotes no association, while a value of 100 percent denotes a perfect association. In the 2022-23 season, the relationship between dairy operating profit per hectare and kilograms of milksolids sold per hectare was lower (R2= 0.4) than in the previous 3 seasons (R2= 0.5). The relationship (R2) between dairy operating profit (\$/ha) and operating expenses (\$/kg MS) is moderate and had varied between 0.5 and 0.6 in the last 10 seasons.

Table 5.4: Relationship (R2) between Production, Profit and Operating Expenses

| Variable | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 |
|---|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
| Payout received (\$/kg MS) | 7.69 | 5.76 | 3.92 | 5.79 | 6.62 | 6.42 | 7.05 | 7.40 | 9.20 | 8.68 |
| Milksolids (kg MS/ha) | 1,060 | 1,102 | 1,082 | 1,085 | 1,067 | 1,145 | 1,125 | 1,154 | 1,143 | 1,114 |

| R2 (%) - dairy operating profit \$/ha & kg MS/ha | 0.5 | 0.2 | 0.0 | 0.3 | 0.4 | 0.4 | 0.5 | 0.5 | 0.5 | 0.4 |
| R2 (%) - dairy operating profit \$/ha & operating expenses \$/kg MS | 0.5 | 0.6 | 0.6 | 0.5 | 0.6 | 0.6 | 0.6 | 0.6 | 0.6 | 0.6 |

Operating return on dairy assets is a measure of the operating profit generated by the dairy assets employed at the start of the season. This measure excludes non-dairy activities and any change in capital value. The average operating return on dairy assets was 5.4 percent in 2022-23. Grouping farm systems into low (systems 1 and 2), medium (system 3) and high input (systems 4 and 5) show that the median operating return on dairy assets was highest for medium input farms (5.6%, Graph 5.6). There was a significant difference in the variation of operating returns on dairy assets within the groups, with the highest range in the low input farms (-3.5% to 19.2%) and the lowest range in the high input farms (-0.1% to 10.9%).

Graph 5.6: Return on Dairy Assets Distribution

Business profit before tax is another measure of profitability that considers the cost of borrowing and other non-dairy activities. This is the overall profitability of the business enterprise and not just the dairy farm operation (Table 5.5).

Table 5.5: 2022/23 Business Profit before Tax

| Variable | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 |
|--|---------|---------|----------|---------|---------|---------|---------|---------|---------|---------|

| Plus net non-dairy profit | 1,724 | -673 | -318 | 3,331 | 5,444 | 6,904 | 11,894 | 3,870 | 5,499 | 5,136 |
| Plus net off-farm income | 9,991 | 12,078 | 9,238 | 19,811 | 18,114 | 6,670 | 13,167 | 9,838 | -199 | 36,366 |
| Less rent (excluding support block) | 23,366 | 22,250 | 20,047 | 19,582 | 20,703 | 12,499 | 17,280 | 17,069 | 14,929 | 13,227 |
| Less interest | 171,597 | 195,984 | 197,277 | 197,343 | 191,459 | 194,022 | 172,460 | 140,608 | 149,895 | 217,165 |
| Business profit before tax | 362,074 | 90,731 | -139,258 | 167,789 | 231,251 | 197,163 | 304,312 | 392,077 | 537,252 | 349,052 |
| Business profit before tax (\$/total hectares) | 1,981 | 478 | -734 | 887 | 1,174 | 1,077 | 1,681 | 2,131 | 2,868 | 1,834 |

Note:

⁻ Total hectares = Total effective hectares (effective dairy + effective dairy support block + effective non-dairy).

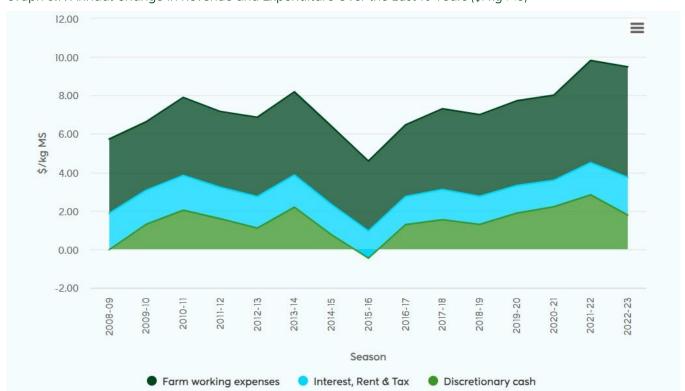

On average, total effective hectares (effective dairy + effective dairy support block + effective non-dairy) increased by three hectares from the previous season to 190 hectares. The average dairy farm in 2022-23 made a business profit before tax of \$349,052. This business profit is equivalent to \$1,834 per total effective hectare, \$1,034 less than the previous year. The dairy operating profit per farm decreased by \$161,238, to \$436,843, compared to the previous season. Rent payments decreased by 11 percent (from \$14,929 to \$13,227). Interest payments per farm in 2022-23 (\$217,165) were the highest of the last 10 seasons, and \$67,270 (45%) higher than the previous season.

5.5. Cash Flow

The cash operating surplus is the difference between net dairy cash income and farm working expenses. In 2022-23 the cash operating surplus was \$593,495, constituting a 23 percent decrease from 2021-22. On a per kilogram of milksolids basis, the cash operating surplus in 2022-23 was \$3.49, down 22 percent from the previous season. Once rent, interest and tax are paid, and net income from non-dairy farming activities are added, the amount left is discretionary cash. Total discretionary cash in 2022-23 was \$302,861, equating to \$1.78 per kilogram of milksolids, 38% lower than the previous season (Table 12.5).

Many farm businesses include cash funds and off-farm income in their annual accounts. The cash available after including these activities and any change of funds deposited or withdrawn from the IRD Income Equalisation Scheme is the cash available for drawings, debt repayments and/or capital development and purchases. Cash available for living and business growth in 2022-23 was \$301,982 per farm, lower than the previous 2 seasons.

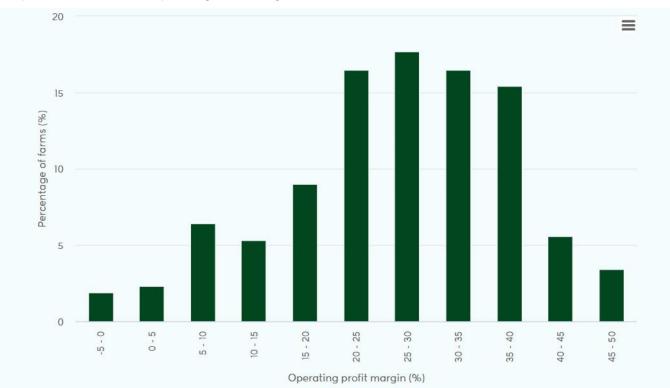

On a per kilogram of milksolids basis, compared to the previous year, Interest, Rent & Tax increased by 17 percent (to \$1.96), Farm working expenses increased by 8 percent (to \$5.75) and Discretionary Cash decreased by 37 percent (to \$1.78) in 2022-23 (Graph 5.7).

Graph 5.7: Annual Change in Revenue and Expenditure Over the Last 10 Years (\$/kg MS)

5.6. Operating Profit Margin

Operating profit margin is an indicator of dairy farm financial performance. This measurement is expressed as a percentage and describes the proportion of gross farm revenue converted to profit (Operating profit/Gross farm revenue). The ability of a farmer to convert a high proportion of their revenue to profit indicates that the farm is cost-efficient and better placed to deal with financial and production risks. The average operating profit margin in 2022-23 was 28 percent, down 7 percentage points from the 2021-22 season (35 percent). Graph 5.8 shows the distribution of operating profit margin in 2022-23. Ninety two percent of farms had an operating profit margin between 5 and 45 percent, with 3.4 percent of farms having an operating profit margin above 45 percent and 1.9 percent of farms having a negative operating profit margin.

Graph 5.8: Distribution of Operating Profit Margin (%)

6. Owner Operator: Equity and Capital Financial Analysis

6.1. Introduction

This section considers owner-operator dairy farms' equity and capital position, with additional information about trends over time.

Following significant reductions in capital expenditure and a moderate reduction in net debt, a cash surplus of \$44,541 per farm was recorded in the 2022-23 season, a \$41,998 increase from the one in 2021-22 season (\$2,543). The 2022-23 cash surplus is significantly above the 10-year average of \$10,654, but below the cash surplus generated in the 2016-17 (\$66,272), 2019-20 (\$57,909) and the 2020-21 (\$59,112) seasons (Table 12.5). The operating return on dairy assets decreased from 7.6 percent in 2021-22 to 5.4 percent in 2022-23, and the total return on equity decreased from 11.5 percent in 2021-22 to 3.5 percent in 2022-23 (Table 12.7). Total liabilities as a percentage of total assets (debt to asset ratio) decreased to 44.4 percent at the end of the season, a steady decrease from the peak of 53.4 percent in 2018-19, and close to the levels of nine and ten years ago. Closing term liabilities per kilogram of milksolids decreased to \$22.22, the second lowest of the last ten seasons.

6.2. Dairy Assets

Compared to the 2021-22 season, the number of dairy farms sold in 2022-23 decreased by 30 percent (60 farms) to 140. The REINZ average sales price per kilogram of milksolids and per hectare for the last 10 seasons is shown below in Table 6.1. Hectares are measured as total rather than effective area, which is generally used in this publication. The analysis only includes farms considered to be economic units. Raw data from REINZ prior to 2019-20 was weighted by the number of farms in each region, but from 2019-20 figures have not been weighted. The average dairy land price per kilogram of milksolids increased to \$37 in 2022-23, \$2 higher than in the previous two seasons, but similar to that of the 2019-20 season. However, this value is still below the peak of \$44 observed in the 2014-15 season.

Table 6.1: Average Sales Price and Number of Dairy Farms Sold

| Variable | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 |
|--|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
| Farms sold | 312 | 244 | 192 | 217 | 226 | 148 | 113 | 198 | 200 | 140 |
| Average \$ sale price/kg MS | 42 | 44 | 39 | 40 | 40 | 38 | 37 | 35 | 35 | 37 |
| Average \$ sale price/ha | 36,369 | 39,577 | 36,557 | 37,835 | 38,015 | 36,846 | 33,410 | 31,393 | 34,427 | 34,600 |
| Average \$ sale price/ha (Inflation adjusted) | 45,918 | 49,764 | 45,780 | 46,575 | 46,105 | 43,951 | 39,281 | 35,716 | 36,503 | 34,600 |
| СРІ | 975 | 979 | 983 | 1,000 | 1,015 | 1,032 | 1,047 | 1,082 | 1,161 | 1,231 |

Note: - Inflation-adjusted value (real dollar value) has been estimated using the Consumers Price Index for the end of the June quarter (Sourced from Statistics New Zealand)

6.3. Liabilities and Debt Servicing

Interest is the cash cost of borrowing funds, while rent is the cost of borrowing assets. Interest and rent per kilogram of milksolids decreased steadily in recent years, from \$1.36 in 2014-15 and 2015-16 to \$0.95 in 2021-22, but in 2022-23 it increased back to its 2014-15 and 2015-16 value (\$1.36) (Table 6.2). Interest and rent represented 14.7 percent of gross farm revenue, 5 percentage points higher than in the previous season. This means that for every dollar of gross income earned \$0.147 are required to pay interest and rent.

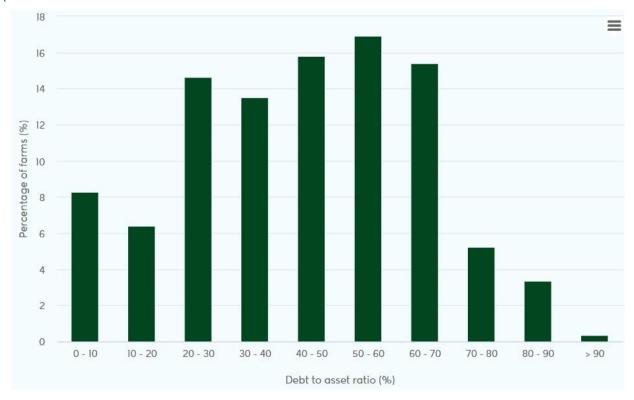

Table 6.2: Debt Servicing Ratios

| Variable | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 |
|---------------------------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
| Interest & rent \$/kg MS | 1.29 | 1.36 | 1.36 | 1.35 | 1.31 | 1.24 | 1.12 | 0.92 | 0.95 | 1.36 |
| Interest & rent % GFR | 15.6 | 21.5 | 30.5 | 21.2 | 18.2 | 17.7 | 14.7 | 11.6 | 9.7 | 14.7 |
| Term liabilities \$/kg MS | 20.14 | 21.26 | 22.49 | 25.00 | 25.31 | 24.92 | 23.25 | 22.37 | 23.56 | 22.22 |

Compared to the 2021-22 season, debt to asset ratio decreased by 3 percentage points in 2022-23, to 44.4 percent (Table 12.6). Debt to asset ratio decreased for the fourth season in a row, from the peak of 53.4 percent in 2018-19 (Table 12.6). The debt to asset ratio in 2022-23 is the second lowest of the last ten seasons, just above that of the 2013-14 season (\$41.9).

Graph 6.1 shows the debt to asset ratio distribution in 2022-23. More than eight percent of farms had a debt to asset ratio below 10 percent, about thirty-five percent of farms had a debt to asset ratio between 10 and 40 percent. Nine percent of the farms had a debt to asset ratio over 70 percent, with 0.4 percent sitting in the high-risk area of over 90 percent.

Graph 6.1: Debt to Asset Distribution

Over the last ten years, the average farm has increased its milksolids production by 12 percent, while total liabilities have increased by about 25 percent, from \$3.2 million to \$4.0 million per farm. Compared to the previous season, farmers decreased their term liabilities in 2022-23 by 7 percent (Table 12.6)

6.4. Liquidity

Given the reduction in net dairy cash income, a cash operating surplus of \$593,495 was recorded in 2022-23, \$178,194 lower compared to the previous season. Table 6.3 shows a breakdown of the changes in working capital, including the source and application of cash funds. The main contributor to total source of funds in 2022-23 was the cash operating surplus from the current season's farming operation (Table 6.3). The change in working capital increased to \$300,828 in 2022-23, \$35,354 more than the previous season. This is mainly associated to the reduction in current liabilities (-\$16,836).

Of the total cash available (total source of funds), 37 percent was spent on interest in 2022-23 (Table 6.3). Net capital transactions (development and purchases) were the second large cash expenditure area in 2022-23 (24 percent). Drawings from the dairy business for farm family living represented 20 percent of cash expenditure, while tax payments (17 percent) and rent (2 percent) make up the remainder of the cash spent.

Table 6.3: Flow of funds

| Variable | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 |
|---|---------|----------|---------|---------|---------|---------|---------|---------|---------|---------|
| WORKING CAPITAL: | | | | | | | | | | |

| APPLICATION OF FUNDS: | | | | | | | | | | |
| Rent (excluding support block) | 23,366 | 22,250 | 20,047 | 19,582 | 20,703 | 12,499 | 17,280 | 17,069 | 14,929 | 19,996 |
| Plus interest | 171,597 | 195,984 | 197,277 | 197,343 | 191,459 | 194,022 | 172,460 | 140,608 | 149,895 | 205,012 |
| Plus tax | 58,155 | 34,078 | 7,939 | 16,773 | 41,532 | 38,315 | 52,696 | 77,161 | 124,502 | 93,434 |
| Plus net capital transactions | 143,703 | 201,119 | 76,697 | 109,749 | 238,591 | 207,027 | 113,522 | 148,238 | 267,306 | 218,197 |
| Plus drawings | 116,224 | 110,437 | 78,151 | 82,043 | 104,334 | 95,173 | 92,090 | 106,679 | 114,873 | 111,668 |
| Total application of funds | 513,045 | 563,868 | 380,111 | 425,490 | 596,619 | 547,036 | 448,048 | 489,756 | 671,505 | 648,307 |
| Total source of funds less application of funds | 67,292 | -156,556 | -43,946 | 132,546 | -84,550 | -26,593 | 257,903 | 285,202 | 268,215 | 300,123 |

6.5. Returns

The return on dairy assets is discussed under farm profitability (Section 5.4). The total return on assets considers operating profit from both dairy and non-dairy farming operations, plus the change in the value of capital assets. The total return on assets in 2022-23 was 3.9 percent, 3.6 percentage points lower than the previous season. The 2022-23 total return on assets comprised 5.4 percent net return from all farming operations and -1.5 percent net return from capital (Graph 6.2).

For the past decade, the percentage of total return on assets has ranged between -4.1 and 9.6 percent, driven by changes in the value of land and buildings, dairy company share values, livestock values and profits (Table 12.6 and Table 12.7).

Graph 6.2: Owner Operator Total Return on Assets

The percentage return on equity is the return on the owner's funds, including capital changes after interest is paid (Table 12.7). The return on equity will be higher than the total return on assets when the latter is greater than the cost of debt and vice versa. In 2022-23 the total return on equity (3.5 percent) was lower than the total return on assets (3.9%), and 8 percentage points lower than in 2021-22.

7. Owner Operator: Regional and Systems Financial Analysis

7.1. Regional Profitability

DairyBase® classifies farms into eight regions, five in the North Island and three in the South Island (refer to Section 2.6). The values reported in Table 7.1 and 7.2 are median values to reduce numerical bias created by the average of sums methodology in regional samples. Thus, totals and sub-totals in these tables will not add up but will better represent the average values of the data sample. See section 2.11 for an explanation of this methodology.

Table 7.1 shows the values of key performance indicators (KPI) per kilogram of milksolids in the eight regions, for the 2022-23 season. Dairy farms in the Taranaki region had the smallest herd size (260 cows), followed by Northland (290). The Canterbury and Otago-Southland regions had the largest herd sizes in New Zealand, with 718 cows and 610 cows, respectively.

The West Coast - Top of the South, Northland and Lower North Island regions had the lowest stocking rates in the country, with 2.4, 2.4 and 2.5 cows/ha, respectively. Canterbury had the highest stocking rate (3.4 cows/ha), and the remaining regions had a stocking rate that varied between 2.8 and 2.9 cows/ha.

Northland recorded the lowest average milksolids production per cow of all the regions (349 kg MS). The other four North Island regions recorded milksolids per cow between 387 and 416 kg MS (Table 7.1). The Otago-Southland region had the highest milksolids production per cow (466 kilograms) in the South Island and the rest of the country. However, Canterbury production is considerably higher on a per hectare basis (1,474 kilograms) due to its higher stocking rate.

The average payout received in each region varied between \$8.52 and \$8.71 per kilogram of milksolids sold. Regional average farm working expenses (FWE) per kilogram of milksolids were lowest in Taranaki (\$5.08), and the highest FWE per kilogram of milksolids was reported in Northland and Canterbury (\$5.69 each). Canterbury (\$4,495), Taranaki (\$3,354), and Otago-Southland (\$3,353) recorded the highest operating profit on a per hectare basis, while the West Coast - Top of the South region recorded the lowest operating profit per hectare (\$1,587). Farms in the Taranaki and Canterbury regions experienced higher levels of profitability in 2022-23 relative to other regions in terms of dairy operating profit per kilogram of milksolids (Table 7.1).

Table 7.1: Regional Owner-operator Profitability (\$/kg MS) 2022/23

| Variable | Northland | Waikato | Bay of Plenty | Taranaki | Lower North Island | West Coast - Top of the South | Canterbury | Otago - Southland |

Table 7.2 shows the values for the key indicators of financial position for the eight regions in 2022-23. The values reported in this table are medians; see section 2.11 for an explanation of this methodology. Regional median for operating returns on dairy assets ranged between 4.2 and 6.6 percent. Canterbury (6.6%) and Otago - Southland (6.4%) had the highest operating return on dairy assets in 2022-23. Northland had the lowest operating returns on dairy assets (4.2%). In the case of total return on assets, Northland (11.0%) and West Coast - Top of the South (10.7%) recorded the highest values, while Waikato recorded the lowest (1.7%).

Total return on equity is the return on the owner's funds, including capital changes after interest is paid. All regions had a positive percentage of total return on equity, except for Waikato, which was -0.3 percent (Table 7.2). The regional median for equity growth was negative for Waikato (-2.1 percent) and Canterbury (-1.8 percent), but positive in the other regions. Northland and West Coast - Top of the South had the largest growth in equity (15.9% and 17.8%, respectively).

Average term liabilities per kilogram of milksolids in 2022-23 varied significantly between regions. The range in term liabilities was \$15.62 to \$28.37 per kilogram of milksolids. Taranaki was the region with the highest term liabilities per kilogram of milksolids (\$28.37) while West Coast - Top of the South was the lowest (\$15.62/kg MS). Debt to asset levels also varied significantly between regions. Bay of Plenty and Northland had the lowest values (40.0 and 40.4 percent, respectively), while Taranaki had the highest (54.5%).

Table 7.2: Regional Owner-operator Financial Position 2022/23

| Variable RETURNS: | Northland | Waikato | Bay of Plenty | Taranaki | Lower North Island | West Coast - Top of the South | Canterbury | Otago - Southland |
|--|-----------|---------|------------------|----------|--------------------------|-------------------------------------|------------|----------------------|
| Operating return on dairy assets % | 4.2 | 4.7 | 5.0 | 4.9 | 4.5 | 5.9 | 6.6 | 6.4 |
| Total return on assets % | 11.0 | 1.7 | 5.0 | 4.4 | 7.2 | 10.7 | 3.2 | 4.2 |
| Total return on equity % | 15.9 | -0.3 | 4.5 | 4.0 | 7.9 | 17.8 | 2.5 | 4.0 |
| Growth in equity % | 14.7 | -2.1 | 5.5 | 2.5 | 6.0 | 18.3 | -1.8 | 1.3 |
| DEBT: | | | | | | | | |
| Closing term liabilities (\$/kg MS sold) | 22.23 | 24.31 | 19.49 | 28.37 | 24.44 | 15.62 | 20.08 | 19.52 |
| Closing debt to asset % | 40.4 | 46.3 | 40.0 | 54.5 | 43.0 | 43.3 | 47.4 | 48.7 |

7.2. Production Systems

DairyBase® categorises farms into five production systems based on the quantity of feed purchased (including off-farm grazing) and the timing and use of imported feed (refer to Section 2.7 for production system descriptions). For the following analysis, the systems have been combined to produce three categories: low (systems 1 and 2), medium (system 3) and high (systems 4 and 5). Within each production system, there is variation in milksolids production and profitability. The production system type is not a good indicator of profitability as a farm can be profitable (or unprofitable) operating at any system. Profit is less to do with the production system type and more to do with the management, milksolids production and the costs within the production system.

The averages reported in Table 7.3 and 7.4 are median values to reduce numerical bias created by the average of sums methodology in regional samples. Thus, totals and sub-totals in these tables will not add up but will better represent average values in the data sample. See section 2.11 for an explanation of this methodology.

Table 7.3 shows the key 2022-23 average performance indicators per kilogram of milksolids in the three production system categories. Average stocking rates increase from low to high production systems. Average milksolids per cow and per hectare also follow this trend, reflecting higher inputs of supplementary feed. On average low system farms recorded 372 kg MS per cow, medium system farms recorded an average of 400 kg MS per cow while high input farms recorded an average of 444 kg MS per cow. The average milksolids production per hectare in medium input farms (1,090 kg) was 87 kilograms higher than in low input farms (1,003 kg) and 272 kilograms lower than in high input farms (1,275 kg).

Dairy cash income per kilogram of milksolids was highest for high input systems (\$9.25) due to milk sales being greater than the other two systems. Low input (\$9.20) and medium input systems (\$9.23) had similar average dairy cash incomes per kilogram of milksolids. Farm working expenses per kilogram of milksolids were \$5.05 for low input systems, \$5.50 for medium input systems and \$6.09 for high input systems.

Cash operating surplus per kilogram of milksolids was the highest for low input systems (\$4.15), followed by medium input systems (\$3.71). High input systems recorded the lowest average cash operating surplus of \$3.23 per kilogram of milksolids. Operating profit per kilogram of milksolids was highest for medium input systems (\$2.72), and lowest for high input systems (\$2.20). Low input systems had an operating profit per kilogram of milksolids of \$2.69, which was close to that of medium input systems. Operating profit per hectare was highest for medium input systems (\$2,972), \$277 higher than high input systems (\$2,6895) and \$523 higher than low input systems (\$2,449).

Table 7.3: Owner-operator Production Systems Profitability (\$/kg MS)

| Variable | 1 & 2 (Low) | 3 (Medium) | 4 & 5 (High) |

| Dairy gross farm revenue | 9.17 | 9.18 | 9.21 |
| Dairy operating expenses | 6.64 | 6.36 | 7.22 |
| Dairy operating profit | 2.69 | 2.72 | 2.20 |
| OPERATING CASH & NON-CASH (\$/ha): | | | |
| Dairy gross farm revenue | 9,361 | 10,122 | 12,003 |
| Dairy operating expenses | 6,268 | 7,002 | 9,062 |
| Dairy operating profit | 2,449 | 2,972 | 2,695 |
| Operating profit margin (%) | 28.9 | 29.0 | 24.5 |

Table 7.4 shows key 2022-23 average financial indicators in the three production system categories. The averages reported in this table are medians; see section 2.11 for an explanation of this methodology. The operating return on dairy assets was highest for medium input farms (5.6%) and lowest for high input farms (4.6%). Once capital and non-dairy operations were included, the average total return on assets was 5.1 percent for low input farms, 4.0 percent for medium input farms and 3.6 percent for high input farms. Low input farms had the smallest debt to asset ratio (40 percent), closely followed by medium input farms (44 percent). High input farms had a debt to asset ratio of 52 percent. Closing term liabilities per kilogram of milksolids was higher for low and medium input systems (\$22.29 and 22.28) than for high input systems (\$20.95).

All farm system types had positive median growth in equity percentages. Medium and high input systems recorded an average growth in equity of 1.9 and 0.7 percent, respectively. Average growth in equity for low input systems (3.9 percent) more than doubled that of medium and high input systems (Table 7.4).

Table 7.4: Owner-operator Production Systems Financial Position 2022/23

| Variable | 1 & 2 (Low) | 3 (Medium) | 4 & 5 (High) |
|--|-------------|------------|--------------|

| Closing debt to asset % | 39.8 | 43.8 | 52.4 |

8.50:50 Sharemilkers: Operational Financial Analysis

8.1. Introduction

Operating profit per hectare for 50:50 sharemilkers (herd owning sharemilkers) decreased by 37 percent to \$1,104 per hectare in 2022-23. In terms of the revenue composition the lower payout received in 2022-23 was partially offset by the increase in milksolids production per hectare (from 1,227 kg in 2021-22 to 1,239 in 2022-23). Operating expenses per kilogram of milksolids increased by 4 percent to \$3.76. The average cash available for living and growth decreased to \$181,016 per farm, a decrease of \$68,472 from 2021-22 (Table 13.5). With increased capital expenditure, drawings and debt, a cash surplus of \$5,853 per farm was recorded in 2022-23 (Table 13.5).

Tables 13.1, 13.2, 13.3 and 13.4 in Chapter 13 show net cash income, cash farm working expenses and the adjustments made to calculate operating profit for the average New Zealand 50:50 sharemilker on a per farm, per cow, per hectare and per kilogram of milksolids sold basis.

8.2. Revenue

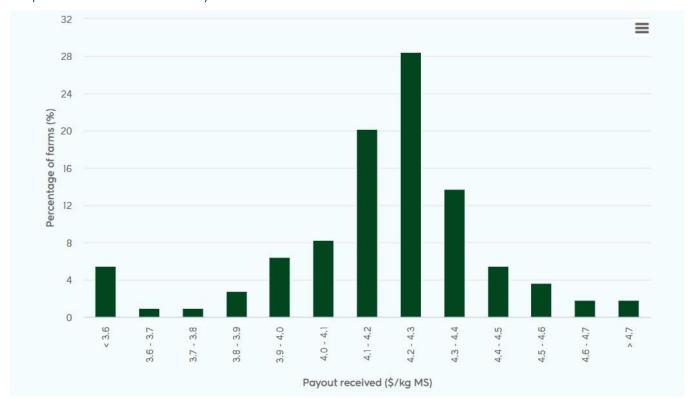

The milk payout received (including dividend payments) in 2022-23 decreased \$0.40 (9 percent) from the previous season to \$4.14 per kilogram of milksolids. Both, kilograms of milksolids sold per cow and per hectare increased from 2021-22 to 2022-23, by 10 and 12 kg MS, respectively (Table 13.5). The average milk sales (net of dairy levies) per farm of 752,157 kg was lower than in the previous season (\$778,049). Milk revenue in 2022-23 accounted for 89 percent of gross farm revenue. Livestock revenue accounted for 5.6 percent of the total gross farm revenue per farm.

Figure 8.1 shows the variation in milksolids payout received by farmers in the 2022-23 season. These differences are driven by:

- Differences in the percentage of milk payment received,
- Variations in the milk composition (fat, protein, lactose, minerals),
- Annual account balance dates,
- Milk company supplied,
- Different systems such as organics,
- Penalties incurred, and,
- Whether the sharemilker operated in the previous season.

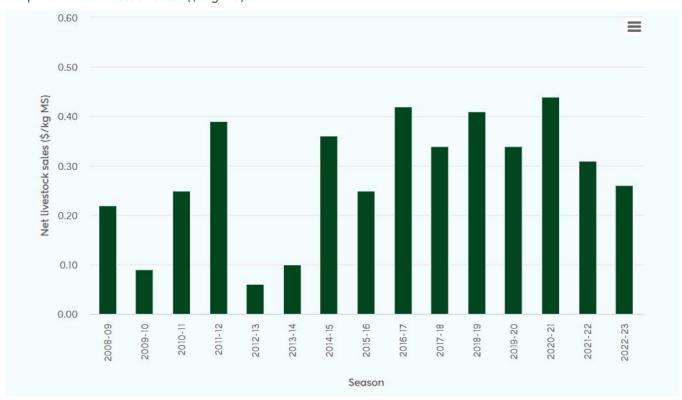

The majority (62%) of farmers in this business type received a milksolids payout between \$4.10 and \$4.40.

Graph 8.1: Distribution of Milk Payout Received

Cash income from net livestock sales decreased by \$0.05 to \$0.26 per kilogram of milksolids in 2022-23 (Figure 8.2). Net livestock sales per cow decreased by \$17 to \$108, the lowest from the last 6 seasons.

Graph 8.2: Net Livestock Sales (\$/kg MS)

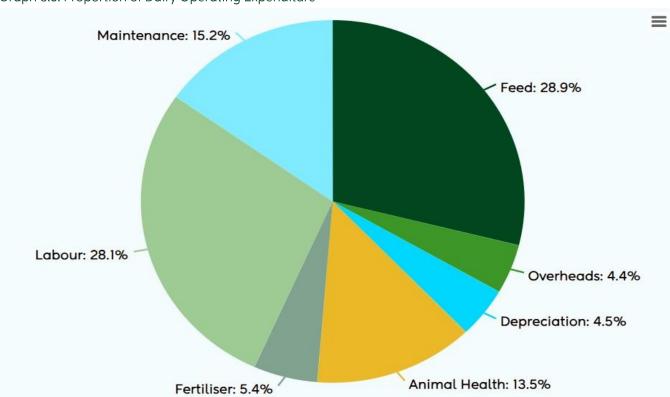

Dairy gross farm revenue for a typical New Zealand sharemilker was \$844,762 and was larger than the previous season by 2 percent (\$865,070 in 2020-21). On a per hectare basis, gross farm revenue of \$5,763 was lower (+7 percent) in 2022-23 compared to 2021-22.

Tables 13.1, 13.2, 13.3 and 13.4 show net cash income, cash farm working expenses and the adjustments made to calculate operating profit for the average New Zealand owner-operator on a per farm, per cow, per hectare and per kilogram of milksolids sold basis, respectively.

8.3. Expenditure

Feed and labour were the largest expenditure category 2022-23 (28.9 and 28.1 percent, respectively). Maintenance and animal health contributed 15.2 and 13.5 percent, respectively. Figure 8.3 shows the major 2021-22 expenditure categories for sharemilkers.

Graph 8.3: Proportion of Dairy Operating Expenditure

Changes in total farm expenditure for sharemilkers are primarily affected by the herd size and milksolids produced, since sharemilkers primarily pay animal related costs. Compared to the previous season, farm working expenses (FWE) per farm increased by 13 percent to \$554,471. On a per kilogram of milksolids basis, FWE increased \$0.19 to \$3.05. After non-cash adjustments, operating expenses per kilogram of milksolids were \$0.15 higher (\$3.76) in 2022-23.

Table 8.1 shows the historical distribution (%) of dairy expenses in the last 10 seasons. Historically, labour expenses represented the highest proportion of operating expenses for 50:50 sharemilkers, but the proportion (%) of feed expenditure in the 2022-23 season (29%) was higher than labour expenses. This can be associated to the high feed costs and inflation during that season. The proportion of fertiliser expenses (5.4) also increased during the 2022-23 season and was the highest of the last 10 seasons.

Table 8.1: Proportion (%) of Dairy Operating Expenditure in the last 10 years.

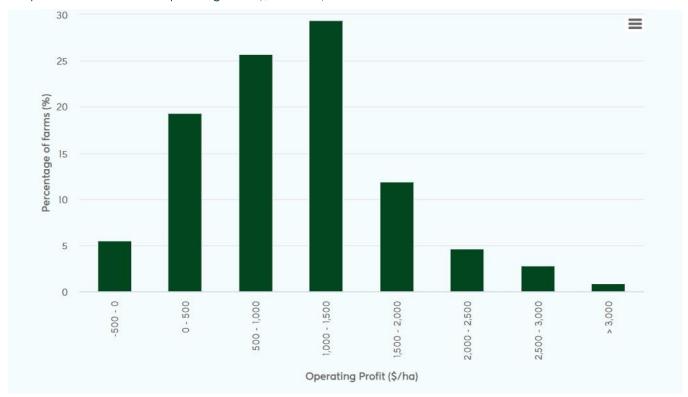

| Season | Animal health expenditure (%) | Depreciation expenditure (%) | Feed expenditure (%) | Fertiliser expenditure (%) | Labour expenditure (%) | Maintenance expenditure (%) | Overheads expenditure (%) |
|---------|-------------------------------------|------------------------------------|----------------------------|----------------------------------|------------------------------|-----------------------------------|---------------------------------|
| 2013-14 | 13.8 | 5.2 | 26.3 | 5 | 28 | 17.1 | 4.6 |
| 2014-15 | 13.7 | 5.7 | 26.2 | 4.6 | 29.2 | 15.7 | 4.9 |
| 2015-16 | 13.2 | 5.9 | 23.9 | 4.8 | 31.1 | 16.1 | 5 |
| 2016-17 | 14.1 | 5 | 22.5 | 4.9 | 31.2 | 17.4 | 4.9 |
| 2017-18 | 13.8 | 5.4 | 25 | 4.5 | 30.8 | 16 | 4.5 |
| 2018-19 | 14.4 | 4.8 | 26.7 | 4.7 | 29.1 | 15.6 | 4.7 |
| 2019-20 | 14.1 | 4.9 | 26.8 | 5.1 | 29 | 15.7 | 4.4 |
| 2020-21 | 14.2 | 5.1 | 25.6 | 4.4 | 30.4 | 15.8 | 4.5 |
| 2021-22 | 14.2 | 4.5 | 27.8 | 4.8 | 29.3 | 15.1 | 4.3 |
| 2022-23 | 13.5 | 4.5 | 28.9 | 5.4 | 28.1 | 15.2 | 4.4 |

8.4. Profitability

Operating profit is a key indicator of dairy farm financial performance. This measure, expressed on a per hectare basis, is useful for comparing the profitability between farms. Operating profit incorporates adjustments to allow comparisons between farms but does not include interest, tax or rent payments. Tables 13.1, 13.2, 13.3 and 13.1 show the revenue and expenditure items included in operating profit. On average, operating profit per hectare in the 2022-23 season (\$4,659) was the highest of the last 10 seasons.

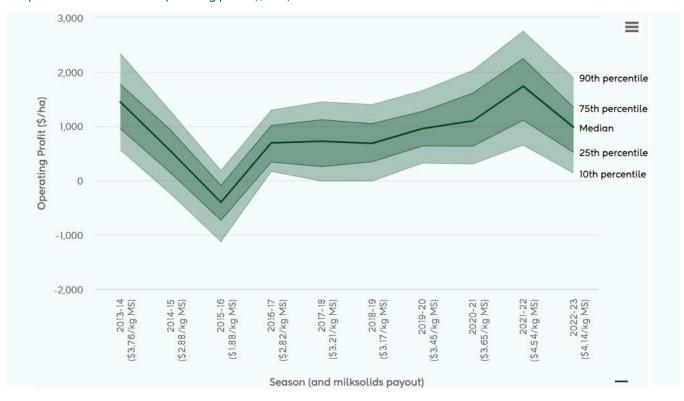

Graph 8.4 shows the distribution of operating profit per hectare in the 2022-23 season. Fifty-five percent of 50:50 sharemilkers had operating profits between \$1,000 and \$1,500 per hectare, while 0.9 percent of farmers had operating profits over \$3,000 per hectare. About 5.5 percent of farms recorded a negative operating profit in 2022-23 (Graph 8.4).

Graph 8.4: Distribution of Operating Profit (\$/hectare)

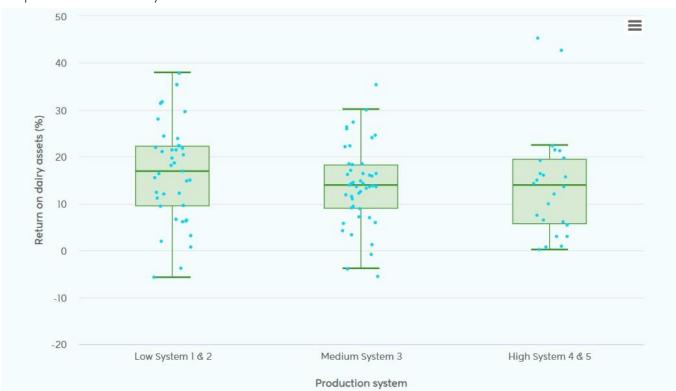

Graph 8.5 shows the distribution of operating profit (\$/ha) in the last ten seasons. As for owner-operators, the distribution of operating profit for 50:50 sharemilkers has noticeable shifts across seasons, and it is clearly influenced by the milksolids payout received. In 2022-23, the range in operating profit (\$/ha) was smaller than in the previous season, with 50% of farms (between the 25th and 75th percentile) having an operating profit per hectare spanning \$773 (between \$578 and \$1,348). Ten percent of farms had an operating profit per hectare below \$136.

Graph 8.5: Distribution of operating profit (\$/ha) in the last 10 seasons

Operating return on dairy assets measures the operating profit generated by the dairy assets employed at the start of the season. This measure excludes non-dairy activities and any change in capital value. Operating returns on dairy assets for sharemilkers are more volatile than owner-operators because sharemilkers' dairy assets primarily consist of livestock. The average operating return on dairy assets for sharemilkers increased to 15.9 percent in 2022-23. Figure 8.6 shows the distribution of operating return on dairy assets by production systems. Grouping farm production systems into low (systems 1 and 2), medium (system 3), and high input (systems 4 and 5) show that the median operating return on dairy assets was similar for medium and high input farms (13.9 percent) but higher for low input systems (16.9 percent).

Graph 8.6: Return on Dairy Assets Distribution

Business profit before tax is another measure of profitability that considers the cost of borrowing and other non-dairy activities, measuring the overall profitability of the business enterprise and not just the dairy farm operation (Table 8.2).

Table 8.2: 2022/23 Business Profit before Tax

| BUSINESS PROFIT (\$): | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 |
|--|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|

| Plus owned support block adjustment | 685 | 1,245 | 695 | 508 | 251 | 299 | 479 | 611 | 1,010 | 860 |
| Plus net non-dairy profit | 2,052 | 2,671 | 2,203 | 2,387 | 2,758 | 2,615 | 1,209 | 5,284 | 844 | 2,636 |
| Plus net off-farm income | 3,989 | 3,817 | 4,546 | 2,281 | 4,071 | 5,230 | 10,975 | 8,513 | 12,921 | 12,018 |
| Less rent (excluding support block) | 3,401 | 5,154 | 1,407 | 1,047 | 2,320 | 827 | 1,220 | 438 | 214 | 43 |
| Less interest | 34,599 | 31,805 | 37,949 | 34,629 | 31,626 | 36,976 | 27,516 | 21,389 | 19,725 | 29,384 |
| Business profit before tax | 220,149 | 113,971 | -12,038 | 133,967 | 154,478 | 166,064 | 217,779 | 264,041 | 341,787 | 250,740 |
| Business profit before tax (\$/total hectares) | 1,484 | 755 | -75 | 841 | 967 | 951 | 1,260 | 1,577 | 2,202 | 1,480 |

The average sharemilker in 2022-23 made a business profit before tax of \$250,740 per farm, down \$91,047 compared to the previous season. This business profit is equivalent to \$1,480 per all effective hectares (effective dairy + effective dairy support block + effective non-dairy). Interest paid in 2022-23 (\$29,384) was higher than in the previous three seasons due to the high Official Cash Rate associated with higher inflation, but it was still below the 10-year average of \$30,560. Rent payments were lower than in the previous nine seasons.

8.5. Cash Flow

The cash operating surplus is the difference between net dairy cash income and farm working expenses. In 2022-23, the average cash operating surplus of 50:50 sharemilkers (\$250,934) decreased by 27 percent compared to the previous season. On a per kilogram of milksolids basis, the \$1.38 cash operating surplus was down \$0.63 from last season. Once rent, interest and tax are paid, and net income from non-dairy farming activities and net off-farm income are added, the remaining value is discretionary cash. Total discretionary cash in 2022-23 was \$168,587, equating to \$0.93 per kilogram of milksolids (Table 13.5).

Many farm businesses include cash funds and off-farm income in their annual accounts. The cash available after including these activities and any change of funds deposited or withdrawn from the IRD Income Equalisation Scheme is the cash available for living and growth, which can be used for drawings, debt repayments and/or capital development and purchases. Cash available for living and business growth in 2022-23 was \$181,016 per farm, down 27 percent from last season (Table 13.5).

In 2022-23, on a per kilogram of milksolids basis, net dairy cash income (\$4.51) was higher than in the previous season (\$4.95). After farm working expenses (\$3.05) and interest, rent & tax (\$0.53) were deducted, a discretionary cash of \$0.93 was left per kilogram of milksolids in 2022-23 (Graph 8.7). Discretionary cash per kilogram of milksolids in the 2022-23 season was lower than the previous season, but higher than the 10-year average of (\$0.86).

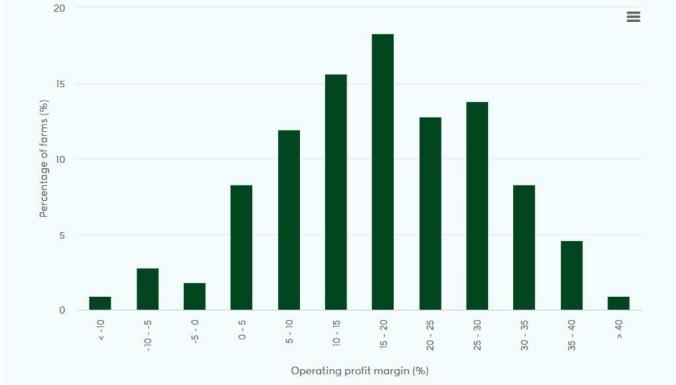

Graph 8.7: Annual Change in Revenue and Expenditure Over 10 Years (\$/kg MS)

8.6. Operating Profit Margin

Operating profit margin is an indicator of dairy farm financial performance. This measurement is expressed as a percentage and describes the proportion of gross farm revenue converted to profit. The ability of a farmer to convert a high proportion of their revenue to profit indicates that the farm is cost-efficient and better placed to deal with financial and production risks. Graph 8.8 shows the distribution of operating profit margins in the 2022-23 season. Seventy-two percent of 50:50 sharemilkers had an operating profit margin between 5 percent and 30 percent (Graph 8.8).

9.50:50 Sharemilkers: Equity and Capital Financial Analysis

9.1. Introduction

This section considers dairy farms' equity and capital position, with additional information about trends over time in these positions.

The average dairy operating profit per hectare of 50:50 sharemilkers in 2022-23 decreased by \$660, to \$1,104. Cash operating surplus per farm in 2022-23 (\$250,934) was 27 percent lower than in the previous year. The average interest paid by 50:50 sharemilkers in 2022-23 (\$29,384) was higher than in the previous three seasons but rent and tax payments were lower (Table 13.5). After the addition of introduced funds and income equalisation, the discretionary cash available 2021-22 was \$168,587, 34 percent lower than in the previous season (\$258,608). The cash surplus per kilogram of milksolids in 2022-23 (\$0.03) was significantly lower than in the previous three seasons (between \$0.23 and \$0.28). Sharemilkers' equity grew by \$62,197 in 2022-23, to \$898,310, driven by growth in equity from the farming operation (\$93,657). Total liabilities as a percentage of total assets (the debt to asset ratio) marginally increased to 36.6 percent at the end of the season. Closing term liabilities per kg of milksolids decreased from \$2.67 (2021-22 season) to \$2.29 (2022-23).

9.2. Dairy Assets

Total dairy assets increased by \$10,930 during the 2022-23 season, closing at \$1,199,475 per farm (Table 13.6). Livestock constitutes the highest proportion of sharemilkers' dairy assets, comprising 68 percent of total dairy assets at closing.

9.3. Liabilities and Debt Servicing

Interest is the cash cost of borrowing funds, while rent is the cost of borrowing assets. The average interest & rent per kilogram of milksolids in 2022-23 was \$0.16, higher than in the previous two seasons, but still lower than the 10-year average of \$0.19 (Table 13.5). The average term debt decreased by (\$48,487) during the 2022-23, closing at \$416,013 per farm (Table 13.6).

The flow of funds (Table 9.1) shows the components of the change in working capital, including the source and application of cash funds. The total source of funds for 2022-23 (\$385,080) were mostly from farm operations (cash operating surplus and change in working capital). Of the funds applied, 39 percent was spent on drawings (9 percentage points higher than the previous season) and 28 percent was used for tax payments (\$66,548). Net capital transactions (\$48,159) represented 21 percent of total funds applied.

Table 9.1: Flow of Funds

| Variable | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 |
|---|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|

| Plus interest | 34,599 | 31,805 | 37,949 | 34,629 | 31,626 | 36,976 | 27,516 | 21,389 | 19,725 | 29,384 |
| Plus tax | 29,237 | 25,101 | 5,492 | 6,220 | 24,199 | 30,109 | 39,336 | 60,010 | 79,532 | 66,548 |
| Plus net capital transactions | 60,379 | 89,030 | 26,407 | 36,654 | 49,540 | 113,811 | 57,631 | 119,380 | 84,090 | 48,159 |
| Plus drawings | 72,813 | 83,335 | 56,461 | 57,721 | 74,517 | 67,169 | 65,458 | 76,247 | 79,739 | 90,535 |
| Total application of funds | 200,429 | 234,425 | 127,716 | 136,271 | 182,202 | 248,891 | 191,161 | 277,464 | 263,300 | 234,670 |
| Total source of funds less application of funds | 38,122 | -43,702 | -80,350 | 63,398 | -25,472 | -26,675 | 153,157 | 220,200 | 199,984 | 150,411 |

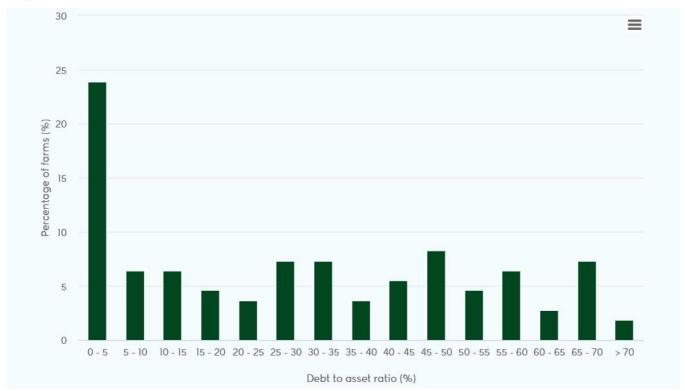

The 2022-23 average 50:50 sharemilkers' cash operating surplus was \$250,934, lower than in the previous two seasons (Table 9.1). This translates to \$1.38 per kilogram of milksolids (Table 13.5). The 2022-23 average level of discretionary cash was \$168,587 per farm, \$90,021 lower than in the previous season. Despite the reduction in the 2022-23, the average discretionary cash for sharemilkers has maintained a strong position since the 2016-17 season (Table 13.5). The average term liabilities per kilogram of milksolids declined to \$2.29 in the 2022-23 season, the lowest of the last 10 seasons (Table 9.2).

Table 9.2: Debt Servicing Ratios

| Variable | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 |
|---------------------------|---------|---------|---------|---------|---------|---------|---------|---------|---------|---------|
| Interest & rent \$/kg MS | 0.27 | 0.24 | 0.27 | 0.25 | 0.23 | 0.20 | 0.16 | 0.12 | 0.12 | 0.16 |
| Interest & rent % GFR | 6.2 | 7.1 | 11.5 | 7.3 | 6.1 | 5.6 | 4.1 | 2.9 | 2.3 | 3.5 |
| Term liabilities \$/kg MS | 3.71 | 3.36 | 4.07 | 4.05 | 3.81 | 3.78 | 3.19 | 2.91 | 2.67 | 2.29 |

The debt to asset ratio increased marginally from 36.5 percent at the close of 2021-22 to 36.6 percent in 2022-23. Debt to asset values have significantly fallen from a period of high debt to asset ratios from 2015-16 to 2018-19, corresponding with stronger milk payouts for sharemilkers.

Graph 9.1 shows the distribution of debt to asset ratio for 50:50 sharemilkers in the 2022-23 season. About 63 percent of farms had a debt to asset ratio below 40 percent. Less than two percent of farms had a debt to asset ratio over 70 percent.

Graph 9.1: Debt to Asset Distribution

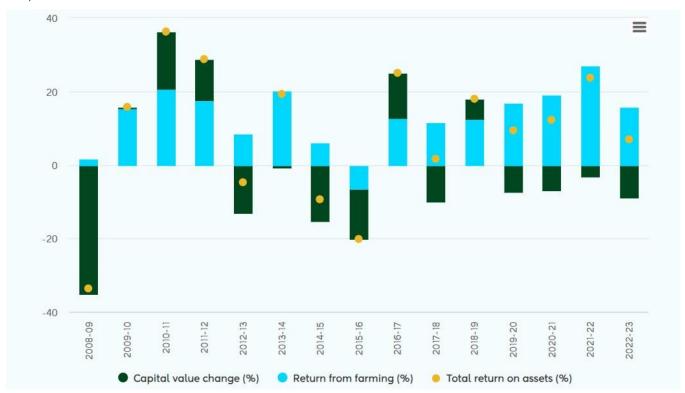

9.4. Returns

The return on dairy assets is discussed under farm profitability (Section 8.4). The total return on assets considers operating profit from both dairy and non-dairy farming operations, plus the change in the value of capital assets. The total return on assets in 2022-23 was 6.8 percent (Table 13.7).

Net returns from dairy activity yielded \$162,696 per farm in the 2022-23 season, combined with an average change in capital value of -\$69,170 per farm. 50:50 Sharemilker returns are more volatile than those earned by owner-operators due to livestock being their largest asset class and livestock values fluctuating with greater magnitude than land prices.

During the last 10 years (2012-13 to 2021-22) the total return on assets has ranged between -20.2 and 25.1 percent, as a result of changes in capital and returns from farming operations (Figure 9.3).

Graph 9.2: Sharemilker Total Return on Assets

The percentage return on equity is the return on the owner's funds, including capital changes after interest is paid (Table 13.7). The return on equity will be higher than the total return on assets when the latter is greater than the cost of debt and vice versa. In 2022-23 the total return on equity was 9.4 percent (Table 13.7), significantly lower than in the previous four seasons, but higher than the 2022-23 total return on assets (6.8 percent). The 2022-23 season was the fifth season in a row with a positive return on equity.

10.50:50 Sharemilkers: Regional Financial Analysis

10.1. Regional Profitability

DairyBase® classifies farms into eight regions, five in the North Island and three in the South Island (refer to Section 2.6). Table 10.1 and 10.2 shows key 2022-23 average performance indicators per kilo milksolids for 50:50 sharemilker farms in these eight regions. The low number of farms in the regions presented here may also reduce the representativeness of the sample. Both Table 10.1 and 10.2 report median values to reduce numerical bias created by the average of sums methodology in regional samples. Thus, totals and sub-totals in these tables will better represent average values of the data sample but will not add up. See section 2.11 for an explanation of this methodology.

Bay of Plenty had the smallest average herd size of 302 cows, followed by Taranaki (324). The average herd sizes in the South Island were considerably larger than in the North Island. Canterbury had the largest average herd size in the South Island with 785 cows, 197 cows above the South Island simple average (588), while the average herd size in Otago-Southland was 565 cows.

The regional range of stocking rates varies between 2.0 and 3.7 cows per hectare. West Coast - Top of the South (2 cows/ha) and Northland (2.3 cows/ha) had the lowest stocking rates. Canterbury had the highest stocking rate at 3.7 cows per hectare, while the remaining regions had average stocking rates between 2.7 and 3.

The regional averages for milksolids production per cow varied between 342 and 475 in 2022-23. West Coast - Top of the South recorded the lowest average milksolids production per cow of all the regions (342 kg MS). The North Island regions recorded milksolids per cow between 363 and 413 kg MS. Otago - Southland recorded the highest milksolids sold per cow (475 kg MS), while Canterbury recorded the highest milksolids sold per hectare of 1,561 (Table 10.1).

The average payout received in each region was at or above \$4.10 per kilogram of milksolids. Regional average farm working expenses (FWE) per kilogram of milksolids were lowest in Taranaki (\$2.88). The highest FWE per kilogram of milksolids was reported in West Coast - Top of the South (\$3.48). The bottom of Table 10.1 shows the regional gross farm revenue, operating expenses and operating profit levels on a per hectare basis in 2022-23. Otago - Southland recorded the highest operating profit on a per hectare basis (\$1,363), while West Coast - Top of the South recorded the lowest operating profit per hectare at \$359/ha, however they were not the only region with average dairy operating profit less than \$1,000/ha.

West Coast - Top of the South and Northland recorded the lowest gross farm revenue per hectare (\$3,296 and \$4,251, respectively) and the lowest operating expenses per hectare (\$3,183 and \$3,746, respectively). Canterbury recorded the highest gross farm revenue (\$7,408) and operating expenses (\$6,159) per hectare. 50:50 sharemilkers in Otago - Southland and Bay of Plenty experienced higher levels of profitability in 2022-23 relative to other regions.

Table 10.1: Regional Sharemilker Profitability (\$/kg MS) 2022/23

Table 10.2 shows the eight regions' key 2022-23 financial indicators. The values reported in this table are medians (see section 2.11 for more information). Regional average operating returns on dairy assets ranged between 6.0 and 19.8 percent. Otago - Southland (19.8 percent), Taranaki (17.8 percent) and Bay of Plenty (17.7 percent) had the highest operating returns on dairy assets in 2022-23. West Coast - Top of the South had the lowest operating returns on dairy assets (6.0 percent). West Coast - Top of the South (-2.0 percent) and Northland (-0.8 percent) were the only regions to report negative total return on assets, conversely Otago - Southland had the highest total return on assets (13.1 percent) followed by Bay of Plenty (9.2 percent).

Total return on equity is the return on the owner's funds, including capital changes after interest is paid. Similar to total return on assets, the West Coast - Top of the South (-8.9 percent) and Northland (-1.9 percent) reported negative returns on equity, while the rest of the regions reported positive returns varying from 4 percent to 17.1 percent (Table 10.2). Otago - Southland reported the highest return on equity at 17.1%, followed by Bay of Plenty with 14 percent. The average term debt per kilogram of milksolids varied between \$1.3 (Canterbury) and \$3.61 (West Coast - Top of the South) in 2022-23 (Table 10.2).

11. Dairy Tomorrow Measures

11.1. Annual Update

The Dairy Tomorrow Strategy outlines the aspirations that the New Zealand dairy sector wants to achieve to be competitive, productive, trusted, and valued. A core part of the Strategy is the development of an integrated set of measures for dairy farms. This report focuses on the four measures that together have been selected to help capture the international competitiveness and resilience of the New Zealand dairy sector from an economic perspective. These measures are:

- The cost of production, measured in terms of dollars per kilogram of milksolids, is a popular metric in global studies of competitiveness. In the New Zealand context, it is measured as operating expenses (\$) per kilogram of milksolids. A lower cost of production mitigates the impact of a low milk price on profitability and results in increased operating profit during high milk prices. It is a key measure of resilience as a low cost of production helps to buffer the impacts of a change in the milk price on a farm business.
- The dairy operating profit margin (%) is the ratio of operating profit and gross farm revenue. The dairy operating profit margin is a percentage most often between zero and fifty. A higher value denotes that a farm produces a given level of revenue at a lower cost, indicating that it can better survive through turbulent market and production conditions.
- The operating return on dairy assets, measured in percentage terms, is a key financial metric used worldwide to measure how effectively a business is employing their asset base. This metric captures the ability of a farm to grow through careful, considered investment in high-performing assets.
- The equity to milksolids metric, measured in dollars per kilogram of milksolids terms, reflects resilience through its focus on the value of the farm business asset that is owned and not borrowed. Controlling for the level of milk production makes it easier to compare across farms, both nationally and globally.

The Dairy Tomorrow measures are reported in Tables 11.1 through 11.4 by quartiles and the mean. The quartiles can be interpreted as follows:

- The 25th percentile for a variable represents a value where 25 percent of the data is lower.
- The 50th percentile or median represents the centre of the data, such that 50 percent of data points are lower, and 50 percent are higher than this value.
- The 75th percentile represents a value such that 75 percent of observations are lower than this value.

In comparison, the mean is an average calculated by adding all values together and dividing by the number of observations. The mean provides an average across the values for all observations.

Table 11.1: Cost of Production

| COST OF PRODUCTION (Operating expenses / kg MS) | 2013-14 | 2014-15 | 2015-16 | 2016-17 | 2017-18 | 2018-19 | 2019-20 | 2020-21 | 2021-22 | 2022-23 |
